**PCI DSS v3.2.1 Template for Report on Compliance**

**Revision 1.0**

June 2018

## Document Changes

Date	Version	Description
February 2014	PCI DSS 3.0, Revision 1.0	To introduce the template for submitting Reports on Compliance. <i>This document is intended for use with version 3.0 of the PCI Data Security Standard.</i>
July 2014	PCI DSS 3.0, Revision 1.1	Errata - Minor edits made to address typos and general errors, slight addition of content
April 2015	PCI DSS 3.1, Revision 1.0	Revision to align with changes from PCI DSS 3.0 to PCI DSS 3.1 (see <i>PCI DSS – Summary of Changes from PCI DSS Version 3.0 to 3.1</i> for details of those changes). Also includes minor edits made for clarification and/or format.
April 2016	PCI DSS 3.2, Revision 1.0	Revision to align with changes from PCI DSS 3.1 to PCI DSS 3.2 (see <i>PCI DSS – Summary of Changes from PCI DSS Version 3.1 to 3.2</i> for details of those changes). Also includes minor corrections and edits made for clarification and/or format.
June 2018	PCI DSS 3.2.1 Revision 1.0	Revision to align with changes from PCI DSS 3.2 to PCI DSS 3.2.1 (see <i>PCI DSS – Summary of Changes from PCI DSS Version 3.2 to 3.2.1</i> for details of changes). Also includes minor corrections and edits made for clarification and/or format.

## Table of Contents

<b>Document Changes</b> .....	<b>ii</b>
<b>Introduction to the ROC Template</b> .....	<b>1</b>
<b>ROC Template for PCI Data Security Standard v3.2.1</b> .....	<b>8</b>
<b>1. Contact Information and Report Date</b> .....	<b>8</b>
1.1 <i>Contact information</i> .....	8

<b>Appendix D: Segmentation and Sampling of Business Facilities/System Components.....</b>	<b>187</b>

## Introduction to the ROC Template

This document, the *PCI DSS Template for Report on Compliance for use with PCI DSS v3.2.1, Revision 1.0* (“ROC Reporting Template”), is the mandatory template for Qualified Security Assessors (QSAs) completing a Report on Compliance (ROC) for assessments against the *PCI DSS Requirements and Security Assessment Procedures v3.2.1*. The ROC Reporting Template provides reporting instructions and the template for QSAs to use. This can help provide reasonable assurance that a consistent level of reporting is present among assessors.

**Use of this Reporting Template is mandatory for all v3.2.1 submissions.**

Tables have been included in this template to facilitate the reporting process for certain lists and other information as appropriate. The tables in this template may be modified to increase/decrease the number of rows, or to change column width. Additional appendices may be added if the assessor feels there is relevant information to be included that is not addressed in the current format. However, the assessor must not remove any details from the tables provided in this document. Personalization, such as the addition of company logos, is acceptable.

**Do not delete any content from any place in this document, including this section and the versioning above. These instructions are important for the assessor as the report is written and for the recipient in understanding the context the responses and conclusions are made. Addition of text or sections is applicable within reason, as noted above. Refer to the “Frequently Asked Questions for use with ROC Reporting Template for PCI DSS v3.x” document on the PCI SSC website for further guidance.**

The Report on Compliance (ROC) is produced during onsite PCI DSS assessments as part of an entity’s validation process. The ROC provides details about the entity’s environment and assessment methodology, and documents the entity’s compliance status for each PCI DSS Requirement. A PCI DSS compliance assessment involves thorough testing and assessment activities, from which the assessor will generate detailed work papers. These work papers contain comprehensive records of the assessment activities, including observations, results of system testing, configuration data, file lists, interview notes, documentation excerpts, references, screenshots, and other evidence collected during the course of the assessment. The ROC is effectively a **summary of evidence** derived from the assessor’s work papers to describe how the assessor performed the validation activities and how the resultant findings were reached. At a high level, the ROC provides a comprehensive **summary of testing activities performed and information collected** during the assessment against the *PCI DSS Requirements and Security Assessment Procedures v3.2.1*. The information contained in a ROC must provide enough detail and coverage to verify that the assessed entity is compliant with all PCI DSS requirements.

## ROC Sections

The ROC includes the following sections and appendices:

- Section 1: Contact Information and Report Date
- Section 2: Summary Overview
- Section 3: Description of Scope of Work and Approach Taken
- Section 4: Details about Reviewed Environment
- Section 5: Quarterly Scan Results
- Section 6: Findings and Observations

- Appendix A: Additional PCI DSS Requirements
- Appendices B and C: Compensating Controls and Compensating Controls Worksheet (as applicable)
- Appendix D: Segmentation and Sampling of Business Facilities/System Components (diagram)

The first five sections must be thoroughly and accurately completed, in order for the assessment findings in Section 6 and any applicable responses in the Appendices to have the proper context. The Reporting Template includes tables with Reporting Instructions built-in to help assessors provide all required information throughout the document. Responses should be specific, but efficient. Details provided should focus on concise quality of detail, rather than lengthy, repeated verbiage. Parroting the testing procedure within a description is discouraged, as it does not add any level of assurance to the narrative. Use of template language for summaries and descriptions is discouraged and details should be specifically relevant to the assessed entity.

### ROC Summary of Assessor Findings

With the Reporting Template, an effort was made to efficiently use space, and as such, there is one response column for results/evidence (“ROC Reporting Details: Assessor’s Response”) instead of three. Additionally, the results for “Summary of Assessor Findings” were expanded to more effectively represent the testing and results that took place, which should be aligned with the Attestation of Compliance (AOC).

There are now five results possible – In Place, In Place with CCW (Compensating Control Worksheet), Not Applicable, Not Tested, and Not in Place. At each sub-requirement there is a place to designate the result (“Summary of Assessor Findings”), which can be checked as appropriate. See the example format on the following page, as referenced.

The following table is a helpful representation when considering which selection to make. Remember, only one response should be selected at the sub-requirement level, and reporting of that should be consistent with other required documents, such as the AOC.

**Refer to the “Frequently Asked Questions for use with ROC Reporting Template for PCI DSS v3.x” document on the PCI SSC website for further guidance.**

RESPONSE	WHEN TO USE THIS RESPONSE:	USING THE SAMPLE BELOW:
<b>In Place</b>	The expected testing has been performed, and all elements of the requirement have been met as stated.	<i>In the sample, the Summary of Assessment Findings at 1.1 is “in place” if all report findings are in place for 1.1.a and 1.1.b or a combination of in place and not applicable.</i>

RESPONSE	WHEN TO USE THIS RESPONSE:	USING THE SAMPLE BELOW:
<p><b>In Place w/ CCW</b> (Compensating Control Worksheet)</p>	<p>The expected testing has been performed, and the requirement has been met with the assistance of a compensating control.</p> <p>All responses in this column require completion of a Compensating Control Worksheet (CCW)</p> <p>Information on the use of compensating controls and guidance on how to complete the worksheet is provided in the PCI DSS.</p>	<p><i>In the sample, the Summary of Assessment Findings at 1.1 is “in place with CCW” if all report findings are in place for 1.1.a and 1.1.b with the use of a CCW for one or both (completed at the end of the report) or a combination of in place with CCW and not applicable.</i></p>
<p><b>Not in Place</b></p>	<p>Some or all elements of the requirement have not been met, or are in the process of being implemented, or require further testing before it will be known if they are in place.</p>	<p><i>In the sample, the Summary of Assessment Findings at 1.1 is “not in place” if either 1.1.a or 1.1.b are concluded to be “not in place.”</i></p>
<p><b>N/A</b> (Not Applicable)</p>	<p>The requirement does not apply to the organization’s environment.</p> <p>All “not applicable” responses require reporting on testing performed to confirm the “not applicable” status. Note that a “Not Applicable” response still requires a detailed description explaining how it was determined that the requirement does not apply. In scenarios where the Reporting Instruction states, “If ‘no/yes’, mark as Not Applicable,” assessors may simply enter “Not Applicable” or “N/A” and are not required to report on the testing performed to confirm the “Not Applicable” status.</p> <p><b>Certain requirements are always applicable (3.2.1-3.2.3, for example), and that will be designated by a grey box under “Not Applicable.”</b></p>	<p><i>In the sample, the Summary of Assessment Findings at 1.1 is “not applicable” if both 1.1.a and 1.1.b are concluded to be “not applicable.” A requirement is applicable if any aspects of the requirement apply to the environment being assessed, and a “Not Applicable” designation in the Summary of Assessment Findings should not be used in this scenario.</i></p> <p><i>**Note, future-dated requirements are considered Not Applicable until the future date has passed. While it is true that the requirement is likely not tested (hence the original instructions), it is not required to be tested until the future date has passed, and the requirement is therefore not applicable until that date. As such, a “Not Applicable” response to future-dated requirements is accurate, whereas a “Not Tested” response would imply there was not any consideration as to whether it could apply (and be perceived as a partial or incomplete ROC).</i></p> <p><i>Once the future date has passed, responses to those requirements should be consistent with instructions for all requirements.</i></p>

RESPONSE	WHEN TO USE THIS RESPONSE:	USING THE SAMPLE BELOW:
<b>Not Tested</b>	<p>The requirement (or any single aspect of the requirement) was not included for consideration in the assessment and was not tested in any way.</p> <p>(See “What is the difference between ‘Not Applicable’ and ‘Not Tested’?” in the following section for examples of when this option should be used.)</p>	<p><i>In the sample, the Summary of Assessment Findings at 1.1 is “not tested” if either 1.1.a or 1.1.b are concluded to be “not tested.”</i></p>

### What is the difference between “Not Applicable” and “Not Tested?”

Requirements that are deemed to be not applicable to an environment must be verified as such. Using the example of wireless and an organization that does not use wireless technology in any capacity, an assessor could select “N/A” for Requirements 1.2.3, 2.1.1, and 4.1.1, after the assessor confirms that there are no wireless technologies used in their CDE or that connect to their CDE via assessor testing. Once this has been confirmed, the organization may select “N/A” for those specific requirements, and the accompanying reporting must reflect the testing performed to confirm the not applicable status.

If a requirement is completely excluded from review without any consideration as to whether it could apply, the “Not Tested” option should be selected. Examples of situations where this could occur may include:

- An organization may be asked by their acquirer to validate a subset of requirements—for example: using the prioritized approach to validate certain milestones.
- An organization may wish to validate a new security control that impacts only a subset of requirements—for example, implementation of a new encryption methodology that requires assessment of PCI DSS Requirements 2, 3, and 4.
- A service provider organization might offer a service that covers only a limited number of PCI DSS requirements—for example, a physical storage provider may only wish to validate the physical security controls per PCI DSS Requirement 9 for their storage facility.

In these scenarios, the organization only wishes to validate certain PCI DSS requirements even though other requirements might also apply to their environment. Compliance is determined by the brands and acquirers, and the AOCs they see will be clear in what was tested and not tested. They will decide whether to accept a ROC with something “not tested,” and the QSA should speak with them if any exception like this is planned. This should not change current practice, just reporting.

#### Requirement X: Sample

*Note – checkboxes have been added to the “Summary of Assessment Findings” so that the assessor may double click to check the applicable summary result. Hover over the box you’d like to mark and click once to mark with an ‘x’. To remove a mark, hover over the box and click again.*

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place with CCW	Not Applicable	Not Tested	Not in Place
1.1 Sample sub-requirement			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.1.a Sample testing procedure	Reporting Instruction	<Report Findings Here>					
1.1.b Sample testing procedure	Reporting Instruction	<Report Findings Here>					

## ROC Reporting Details

The reporting instructions in the Reporting Template explain the intent of the response required. There is no need to repeat the testing procedure or the reporting instruction within each assessor response. As noted earlier, responses should be specific and relevant to the assessed entity. Details provided should focus on concise quality of detail, rather than lengthy, repeated verbiage and should avoid parroting of the testing procedure without additional detail or generic template language.

Assessor responses will generally fall into categories such as the following:

- One word (**yes/no**)  
*Example Reporting Instruction: **Indicate whether** the assessed entity is an issuer or supports issuing services. (yes/no)*
- Document name or interviewee job title/reference – In Sections 4.9, “Documentation Reviewed,” and 4.10, “Individuals Interviewed” below, there is a space for a reference number and **it is the QSA’s choice** to use the document name/interviewee job title or the reference number at the individual reporting instruction response.  
*Example Reporting Instruction: **Identify** the document that defines vendor software development processes.*  
*Example Reporting Instruction: **Identify the individuals** interviewed who confirm that ...*
- Sample description – For sampling, the QSA must use the table at “Sample sets for reporting” in the Details about Reviewed Environment section of this document to fully report the sampling, but **it is the QSA’s choice** to use the Sample set reference number (“Sample Set-5”) or list out the items from the sample again at the individual reporting instruction response. If sampling is not used, then the types of components that were tested must still be identified in Section 6 Findings and Observations. This may be accomplished by either using Sample Set Reference numbers or by listing the tested items individually in the response.  
*Example Reporting Instruction: **Identify the sample** of removable media observed.*
- Brief description/short answer – Short and to the point, but provide detail and individual content that is not simply an echoing of the testing procedure or reporting instruction nor a template answer used from report-to-report, but instead relevant and specific to the assessed entity. These responses must include unique details, such as the specific system configurations reviewed (to include what the assessor observed in the configurations) and specific processes observed (to include a summary of what was witnessed and how that verified the criteria of the testing

procedure). It is not enough to simply state that it was verified. Responses must go beyond that and include details regarding *how* a requirement is in place.

*Example Reporting Instruction: **Describe** the procedures for secure key distribution that were observed to be implemented.*

*Example Reporting Instruction: For the interview, **summarize the relevant details** discussed that verify ...*

### **Dependence on another service provider's compliance:**

Generally, when reporting on a requirement where a third-party service provider is responsible for the tasks, an acceptable response for an “in place” finding may be something like:

*“Assessor verified this is the responsibility of Service Provider X, as verified through review of x/y contract (document). Assessor reviewed the AOC for Service Provider X, dated MM/DD/YYYY, and confirmed the service provider was found to be PCI DSS compliant **against PCI DSS v3.2 (or PCI DSS v3.2.1)** for all applicable requirements, and that it covers the scope of the services used by the assessed entity.”*

That response could vary, but what's important is that it is noted as “in place” and that there has been a level of testing by the assessor to support the conclusion that this responsibility is verified and that the responsible party has been tested against the requirement and found to be compliant.

## Do's and Don'ts: Reporting Expectations

DO:	DON'T:
<ul style="list-style-type: none"> <li>▪ Use this Reporting Template when assessing against v3.2.1 of the PCI DSS.</li> <li>▪ Complete all sections in the order specified.</li> <li>▪ Read and understand the intent of each Requirement and Testing Procedure.</li> <li>▪ Provide a response for every Testing Procedure.</li> <li>▪ Provide sufficient detail and information to support the designated finding, but be concise.</li> <li>▪ Describe <i>how</i> a Requirement is in place per the Reporting Instruction, not just that it <i>was</i> verified.</li> <li>▪ Ensure the parts of the Testing Procedure and Reporting Instruction are addressed.</li> <li>▪ Ensure the response covers all applicable system components.</li> <li>▪ Perform an internal quality assurance review of the ROC for clarity, accuracy, and quality.</li> <li>▪ Provide useful, meaningful diagrams, as directed.</li> </ul>	<ul style="list-style-type: none"> <li>▪ Don't report items in the "In Place" column unless they have been verified as being "in place" as stated.</li> <li>▪ Don't include forward-looking statements or project plans in the "In Place" assessor response.</li> <li>▪ Don't simply repeat or echo the Testing Procedure in the response.</li> <li>▪ Don't copy responses from one Testing Procedure to another.</li> <li>▪ Don't copy responses from previous assessments.</li> <li>▪ Don't include information irrelevant to the assessment.</li> <li>▪ Don't leave any spaces blank. If a section does not apply, annotate it as such.</li> </ul>

# ROC Template for PCI Data Security Standard v3.2.1

This template is to be used for creating a Report on Compliance. Content and format for a ROC is defined as follows:

## 1. Contact Information and Report Date

### 1.1 Contact information

Client	
▪ Company name:	
▪ Company address:	
▪ Company URL:	
▪ Company contact name:	
▪ Contact phone number:	
▪ Contact e-mail address:	
Assessor Company	
▪ Company name:	
▪ Company address:	
▪ Company website:	
Assessor	
▪ Lead Assessor name:	
▪ Assessor PCI credentials: (QSA, PA-QSA, etc.)	
▪ Assessor phone number:	
▪ Assessor e-mail address:	
▪ List all other assessors involved in the assessment. If there were none, mark as Not Applicable. (add rows as needed)	
Assessor name:	Assessor PCI credentials: (QSA, PA-QSA, etc.)
▪ List all Associate QSAs involved in the assessment. If there were none, mark as Not Applicable. (add rows as needed)	
Associate QSA name:	Associate QSA mentor name:

**Assessor Quality Assurance (QA) Primary Reviewer for this specific report (not the general QA contact for the QSA)**

▪ QA reviewer name:	
▪ QA reviewer phone number:	
▪ QA reviewer e-mail address:	

**1.2 Date and timeframe of assessment**

▪ Date of Report:	
▪ Timeframe of assessment (start date to completion date):	
▪ Identify date(s) spent onsite at the entity:	
▪ Describe the time spent onsite at the entity, time spent performing remote assessment activities and time spent on validation of remediation activities.	

**1.3 PCI DSS version**

▪ Version of the PCI Data Security Standard used for the assessment (should be 3.2.1):	
--	--

**1.4 Additional services provided by QSA company**

*The PCI SSC Qualification Requirements for Qualified Security Assessors (QSA) v3.0 includes content on “Independence,” which specifies requirements for assessor disclosure of services and/or offerings that could reasonably be viewed to affect independence of assessment. Complete the below after review of relevant portions of the Qualification Requirements document(s) to ensure responses are consistent with documented obligations.*

▪ Disclose all services offered to the assessed entity by the QSAC, including but not limited to whether the assessed entity uses any security-related devices or security-related applications that have been developed or manufactured by the QSA, or to which the QSA owns the rights or that the QSA has configured or manages:	
▪ Describe efforts made to ensure no conflict of interest resulted from the above mentioned services provided by the QSAC:	

## 1.5 Summary of Findings

PCI DSS Requirement	Summary of Findings (check one)			
	Compliant	Non-Compliant	Not Applicable	Not Tested
1. Install and maintain a firewall configuration to protect cardholder data	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. Do not use vendor-supplied defaults for system passwords and other security parameters	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3. Protect stored cardholder data	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4. Encrypt transmission of cardholder data across open, public networks	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5. Protect all systems against malware and regularly update anti-virus software or programs	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6. Develop and maintain secure systems and applications	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7. Restrict access to cardholder data by business need to know	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8. Identify and authenticate access to system components	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9. Restrict physical access to cardholder data	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10. Track and monitor all access to network resources and cardholder data	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11. Regularly test security systems and processes	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12. Maintain a policy that addresses information security for all personnel	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Appendix A1: Additional PCI DSS Requirements for Shared Hosting Providers	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Appendix A2: Additional PCI DSS Requirements for Entities Using SSL/Early TLS for Card-Present POS POI Terminal Connections	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Appendix A3: Designated Entities Supplemental Validation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## 2. Summary Overview

### 2.1 Description of the entity's payment card business

Provide an overview of the entity's payment card business, including:

<ul style="list-style-type: none"> <li>▪ Describe the nature of the entity's business (what kind of work they do, etc.)</li> </ul> <p><b>Note:</b> This is not intended to be a cut-and-paste from the entity's website, but should be a tailored description that shows the assessor understands the business of the entity being assessed.</p>	
<ul style="list-style-type: none"> <li>▪ Describe how the entity stores, processes, and/or transmits cardholder data.</li> </ul> <p><b>Note:</b> This is not intended to be a cut-and-paste from above, but should build on the understanding of the business and the impact this can have upon the security of cardholder data.</p>	
<ul style="list-style-type: none"> <li>▪ Describe why the entity stores, processes, and/or transmits cardholder data.</li> </ul> <p><b>Note:</b> This is not intended to be a cut-and-paste from above, but should build on the understanding of the business and the impact this can have upon the security of cardholder data.</p>	
<ul style="list-style-type: none"> <li>▪ Identify the types of payment channels the entity serves, such as card-present and card-not-present (for example, mail order/telephone order (MOTO), e-commerce).</li> </ul>	
<ul style="list-style-type: none"> <li>▪ Other details, if applicable:</li> </ul>	

### 2.2 High-level network diagram(s)

Provide a **high-level** network diagram (either obtained from the entity or created by assessor) of the entity's networking topography, showing the overall architecture of the environment being assessed. This high-level diagram should summarize all locations and key systems, and the boundaries between them and should include the following:

- Connections into and out of the network including demarcation points between the cardholder data environment (CDE) and other networks/zones
- Critical components within the cardholder data environment, including POS devices, systems, databases, and web servers, as applicable
- Other necessary payment components, as applicable

**<Insert high-level network diagram(s)>**

### 3. Description of Scope of Work and Approach Taken

#### 3.1 Assessor’s validation of defined cardholder data environment and scope accuracy

Document how the assessor validated the accuracy of the defined CDE/PCI DSS scope for the assessment, including:

As noted in PCI DSS, v3.2.1 – “At least annually and prior to the annual assessment, the assessed entity should confirm the accuracy of their PCI DSS scope by identifying all locations and flows of cardholder data, and identify all systems that are connected to or if compromised could impact the CDE (e.g. authentication servers) to ensure they are included in the PCI DSS scope.”

*Note – additional reporting has been added below to emphasize systems that are connected to or if compromised could impact the CDE.*

<ul style="list-style-type: none"> <li>Describe the methods or processes (for example, the specific types of tools, observations, feedback, scans, data flow analysis) used to identify and document all existences of cardholder data (as executed by the assessed entity, assessor or a combination):</li> </ul>	
<ul style="list-style-type: none"> <li>Describe the methods or processes (for example, the specific types of tools, observations, feedback, scans, data flow analysis) used to verify that no cardholder data exists outside of the defined CDE (as executed by the assessed entity, assessor or a combination):</li> </ul>	
<ul style="list-style-type: none"> <li>Describe how the results of the methods/processes were documented (for example, the results may be a diagram or an inventory of cardholder data locations):</li> </ul>	
<ul style="list-style-type: none"> <li>Describe how the results of the methods/processes were evaluated by the assessor to verify that the PCI DSS scope of review is appropriate: <b>Note – the response must go beyond listing the activities that the assessor performed to evaluate the results of the methods/processes; the assessor must also include details regarding the results of the outcome of those activities that gave the assessor the level of assurance that the scope is appropriate.</b></li> </ul>	
<ul style="list-style-type: none"> <li>Describe why the methods (for example, tools, observations, feedback, scans, data flow analysis, or any environment design decisions that were made to help limit the scope of the environment) used for scope verification are considered by the assessor to be effective and accurate:</li> </ul>	
<ul style="list-style-type: none"> <li>Provide the name of the assessor who attests that the defined CDE and scope of the assessment has been verified to be accurate, to the best of the assessor’s ability and with all due diligence:</li> </ul>	
<ul style="list-style-type: none"> <li>Other details, if applicable:</li> </ul>	

### 3.2 Cardholder Data Environment (CDE) overview

Provide an overview of the cardholder data environment encompassing the people, processes, technologies, and locations (for example, client's Internet access points, internal corporate network, processing connections).

<ul style="list-style-type: none"> <li>▪ People – such as technical support, management, administrators, operations teams, cashiers, telephone operators, physical security, etc.: <b>Note</b> – <i>this is not intended to be a list of individuals interviewed, but instead a list of the types of people, teams, etc. who were included in the scope.</i></li> </ul>	
<ul style="list-style-type: none"> <li>▪ Processes – such as payment channels, business functions, etc.:</li> </ul>	
<ul style="list-style-type: none"> <li>▪ Technologies – such as e-commerce systems, internal network segments, DMZ segments, processor connections, POS systems, encryption mechanisms, etc.: <b>Note</b> – <i>this is not intended to be a list of devices but instead a list of the types of technologies, purposes, functions, etc. included in the scope.</i></li> </ul>	
<ul style="list-style-type: none"> <li>▪ Locations/sites/stores – such as retail outlets, data centers, corporate office locations, call centers, etc.:</li> </ul>	
<ul style="list-style-type: none"> <li>▪ Other details, if applicable:</li> </ul>	

### 3.3 Network segmentation

<ul style="list-style-type: none"> <li>▪ Identify whether the assessed entity has used network segmentation to reduce the scope of the assessment. <b>(yes/no)</b> <b>Note</b> -- <i>An environment with no segmentation is considered a “flat” network where all systems are considered in scope due to a lack of segmentation.</i></li> </ul>	
<ul style="list-style-type: none"> <li>▪ <b>If segmentation is not used:</b> Provide the name of the assessor who attests that the whole network has been included in the scope of the assessment.</li> </ul>	
<ul style="list-style-type: none"> <li>▪ <b>If segmentation is used:</b> Briefly describe how the segmentation is implemented.</li> </ul>	
<ul style="list-style-type: none"> <li>– Identify the technologies used and any supporting processes</li> </ul>	
<ul style="list-style-type: none"> <li>– Explain how the assessor validated the effectiveness of the segmentation, as follows:</li> </ul>	
<ul style="list-style-type: none"> <li>– Describe the methods used to validate the effectiveness of the segmentation (for example, observed configurations of implemented technologies, tools used, network traffic analysis, etc.).</li> </ul>	
<ul style="list-style-type: none"> <li>– Describe how it was verified that the segmentation is functioning as intended</li> </ul>	

<p><b>Note</b> – the response must go beyond listing the activities that the assessor performed and must provide specific details regarding how segmentation is functioning as intended.</p>	
<ul style="list-style-type: none"> <li>– Identify the security controls that are in place to ensure the integrity of the segmentation mechanisms (e.g., access controls, change management, logging, monitoring, etc.).</li> </ul>	
<ul style="list-style-type: none"> <li>– Describe how it was verified that the identified security controls are in place</li> </ul> <p><b>Note</b> – the response must go beyond listing the activities that the assessor performed and must provide specific details of what the assessor observed to get the level of assurance that the identified security controls are in place.</p>	
<ul style="list-style-type: none"> <li>▪ Provide the name of the assessor who attests that the segmentation was verified to be adequate to reduce the scope of the assessment AND that the technologies/processes used to implement segmentation were included in the PCI DSS assessment.</li> </ul>	

### 3.4 Network segment details

Describe all networks that store, process and/or transmit CHD:

Network Name (in scope)	Function/ Purpose of Network

Describe all networks that do not store, process and/or transmit CHD, but are still in scope (e.g., connected to the CDE or provide management functions to the CDE):

Network Name (in scope)	Function/ Purpose of Network

Describe any networks confirmed to be out of scope:

Network Name (out of scope)	Function/ Purpose of Network

### 3.5 Connected entities for payment processing and transmission

Complete the following for connected entities for processing and/or transmission. If the assessor needs to include additional reporting for the specific brand and/or acquirer, it can be included either here within 3.5 or as an appendix at the end of this report. Do not alter the Attestation of Compliance (AOC) for this purpose.

Identify All Processing and Transmitting Entities (i.e. Acquirer/ Bank/ Brands)	Directly Connected? (yes/no)	Reason(s) for Connection:		Description of any discussions/issues between the QSA and Processing Entity on behalf of the Assessed Entity for this PCI DSS Assessment (if any)
		Processing	Transmission	
		<input type="checkbox"/>	<input type="checkbox"/>	
		<input type="checkbox"/>	<input type="checkbox"/>	
		<input type="checkbox"/>	<input type="checkbox"/>	

▪ Other details, if applicable (add content or tables here for brand/acquirer use, if needed):

### 3.6 Other business entities that require compliance with the PCI DSS

**Entities wholly owned by the assessed entity that are required to comply with PCI DSS:**  
(This may include subsidiaries, different brands, DBAs, etc.)

Wholly Owned Entity Name	Reviewed:	
	As part of this assessment	Separately

**International entities owned by the assessed entity that are required to comply with PCI DSS:**

List all countries where the entity conducts business. (If there are no international entities, then the country where the assessment is occurring should be included at a minimum.)	Country	

International Entity Name	Facilities in this country reviewed:	
	As part of this assessment	Separately

### 3.7 Wireless summary

<ul style="list-style-type: none"> <li>Indicate whether there are wireless networks or technologies in use (in or out of scope), <b>(yes/no)</b></li> </ul>	
<p><i>If “no,” describe how the assessor verified that there are no wireless networks or technologies in use.</i></p>	
<p><i>If “yes,” indicate whether wireless is in scope (i.e. part of the CDE, connected to or could impact the security of the cardholder data environment), <b>(yes/no)</b>:</i></p> <p>This would include:</p> <ul style="list-style-type: none"> <li>– Wireless LANs</li> <li>– Wireless payment applications (for example, POS terminals)</li> <li>– All other wireless devices/technologies</li> </ul>	

### 3.8 Wireless details

For each wireless technology in scope, identify the following:

Identified wireless technology	For each wireless technology in scope, identify the following (yes/no):		
	Whether the technology is used to store, process or transmit CHD	Whether the technology is connected to or part of the CDE	Whether the technology could impact the security of the CDE

Wireless technology not in scope for this assessment:

Identified wireless technology (not in scope)	Describe how the wireless technology was validated by the assessor to be not in scope

---

## 4. Details about Reviewed Environment

### 4.1 Detailed network diagram(s)

Provide one or more **detailed diagrams** to illustrate each communication/connection point between in scope networks/environments/facilities. Diagrams should include the following:

- All boundaries of the cardholder data environment
- Any network segmentation points which are used to reduce scope of the assessment
- Boundaries between trusted and untrusted networks
- Wireless and wired networks
- All other connection points applicable to the assessment

Ensure the diagram(s) include enough detail to clearly understand how each communication point functions and is secured. *(For example, the level of detail may include identifying the types of devices, device interfaces, network technologies, protocols, and security controls applicable to that communication point.)*

<Insert detailed diagram(s)>

### 4.2 Description of cardholder data flows

**Note:** The term “Capture” in Section 4.2 of the ROC Template refers to the specific transaction activity, while the use of “capture” in PCI DSS Requirement 9.9 refers to the receiving of cardholder data via physical contact with a payment card (e.g. via swipe or dip).

Cardholder data-flow diagrams may also be included as a supplement to the description of how cardholder data is transmitted and/or processed.

<Insert optional data-flow diagram(s)>

Cardholder data flows	Types of CHD involved (for example, full track, PAN, expiry, etc.)	Describe how cardholder data is transmitted and/or processed and for what purpose it is used (for example, which protocols or technologies were used in each transmission)
Capture		
Authorization		
Settlement		
Chargeback		
<b>Identify all other data flows, as applicable (add rows as needed)</b>		
Other (describe)		
Other details regarding the flow of CHD, if applicable:		

### 4.3 Cardholder data storage

Identify and list all databases, tables, and files storing post-authorization cardholder data and provide the following details.

**Note:** The list of files and tables that store cardholder data in the table below must be supported by an inventory created (or obtained from the client) and retained by the assessor in the work papers.

Data Store (database, etc.)	File(s) and/or Table(s)	Cardholder data elements stored (for example, PAN, expiry, Name, any elements of SAD, etc.)	How data is secured (for example, what type of encryption and strength, hashing algorithm and strength, tokenization, access controls, truncation, etc.)	How access to data stores is logged (description of logging mechanism used for logging access to data—for example, describe the enterprise log management solution, application-level logging, operating system logging, etc. in place)

#### 4.4 Critical hardware and software in use in the cardholder data environment

Identify and list all types of hardware and critical software in the cardholder environment. Critical hardware includes network components, servers and other mainframes, devices performing security functions, end-user devices (such as laptops and workstations), virtualized devices (if applicable) and any other critical hardware – including homegrown components. Critical software includes e-commerce applications, applications accessing CHD for non-payment functions (fraud modeling, credit verification, etc.), software performing security functions or enforcing PCI DSS controls, underlying operating systems that store, process or transmit CHD, system management software, virtualization management software, and other critical software – including homegrown software/applications. For each item in the list, provide details for the hardware and software as indicated below. Add rows, as needed.

Critical Hardware			Critical Software		Role/Functionality
Type of Device (for example, firewall, server, IDS, etc.)	Vendor	Make/Model	Name of Software Product	Version or Release	

#### 4.5 Sampling

Identify whether sampling was used during the assessment.

<ul style="list-style-type: none"> <li>▪ If sampling is not used:</li> </ul>	
<ul style="list-style-type: none"> <li>– Provide the name of the assessor who attests that every system component and all business facilities have been assessed.</li> </ul>	
<ul style="list-style-type: none"> <li>▪ If sampling is used:</li> </ul>	
<ul style="list-style-type: none"> <li>– Provide the name of the assessor who attests that all sample sets used for this assessment are represented in the below “Sample sets for reporting” table. <i>Examples may include, but are not limited to firewalls, application servers, retail locations, data centers, User IDs, people, etc.</i></li> </ul>	

– Describe the sampling rationale used for selecting sample sizes (for people, processes, technologies, devices, locations/sites, etc.).	
– If standardized PCI DSS security and operational processes/controls were used for selecting sample sizes, describe how they were validated by the assessor.	

#### 4.6 Sample sets for reporting

**Note:** If sampling is used, this section **MUST** be completed. When a reporting instruction asks to identify a sample, the QSA may either refer to the Sample Set Reference Number (for example “Sample Set-1”) OR list the sampled items individually in the response. Examples of sample sets may include, but are not limited to, firewalls, application servers, retail locations, data centers, User IDs, people, etc. Add rows as needed.

Sample Set Reference Number	Sample Type/ Description (e.g., firewalls, datacenters, change records, User IDs, etc.)	Listing of all items (devices, locations, change records, people, etc.) in the Sample Set	Make/Model of Hardware Components or Version/Release of Software Components	Total Sampled	Total Population
Sample Set-1					
Sample Set-2					
Sample Set-3					
Sample Set-4					

#### 4.7 Service providers and other third parties with which the entity shares cardholder data or that could affect the security of cardholder data

For each service provider or third party, provide:

**Note:** These entities are subject to PCI DSS Requirement 12.8.

Company Name	What data is shared (for example, PAN, expiry date, etc.)	The purpose for sharing the data (for example, third-party storage, transaction processing, etc.)	Status of PCI DSS Compliance (Date of AOC and version #)

#### 4.8 Third-party payment applications/solutions

Use the table on the following page to identify and list all third-party payment application products and version numbers in use, including whether each payment application has been validated according to PA-DSS or PCI P2PE. Even if a payment application has been PA-DSS or PCI P2PE validated, the assessor still needs to verify that the application has been implemented in a PCI DSS compliant manner and environment, and according to the payment application vendor’s *PA-DSS Implementation Guide* for PA-DSS applications or *P2PE Implementation Manual (PIM)* and P2PE application vendor’s P2PE Application Implementation Guide for PCI P2PE applications/solutions.

**Note:** It is not a PCI DSS requirement to use PA-DSS validated applications. Please consult with each payment brand individually to understand their PA-DSS compliance requirements.

**Note:** Homegrown payment applications/solutions **must** be reported at the section for Critical Hardware and Critical Software. It is also strongly suggested to address such homegrown payment applications/solutions below at “Any additional comments or findings” in order to represent all payment applications in the assessed environment in this table.

Name of Third-Party Payment Application/Solution	Version of Product	PA-DSS validated? (yes/no)	P2PE validated? (yes/no)	PCI SSC listing reference number	Expiry date of listing, if applicable
<ul style="list-style-type: none"> <li>Provide the name of the assessor who attests that all PA-DSS validated payment applications were reviewed to verify they have been implemented in a PCI DSS compliant manner according to the payment application vendor’s PA-DSS Implementation Guide</li> </ul>					

Name of Third-Party Payment Application/Solution	Version of Product	PA-DSS validated? (yes/no)	P2PE validated? (yes/no)	PCI SSC listing reference number	Expiry date of listing, if applicable
<ul style="list-style-type: none"> <li>Provide the name of the assessor who attests that all PCI SSC-validated P2PE applications and solutions were reviewed to verify they have been implemented in a PCI DSS compliant manner according to the P2PE application vendor's <i>P2PE Application Implementation Guide</i> and the P2PE solution vendor's <i>P2PE Instruction Manual (PIM)</i>.</li> </ul>					
<ul style="list-style-type: none"> <li>For any of the above Third-Party Payment Applications and/or solutions that are not listed on the PCI SSC website, identify any being considered for scope reduction/exclusion/etc.</li> </ul>					
<ul style="list-style-type: none"> <li>Any additional comments or findings the assessor would like to include, as applicable:</li> </ul>					

#### 4.9 Documentation reviewed

Identify and list all reviewed documents. Include the following:

Reference Number <i>(optional)</i>	Document Name <i>(including version, if applicable)</i>	Brief description of document purpose	Document date <i>(latest version date)</i>
Doc-1			
Doc-2			
Doc-3			
Doc-4			
Doc-5			

#### 4.10 Individuals interviewed

Identify and list the individuals interviewed. Include the following:

Reference Number <i>(optional)</i>	Employee Name	Role/Job Title	Organization	Is this person an ISA? <i>(yes/no)</i>
Int-1				
Int-2				
Int-3				
Int-4				

#### 4.11 Managed service providers

For managed service provider (MSP) reviews, the assessor must clearly identify which requirements in this document apply to the MSP (and are included in the review), and which are not included in the review and are the responsibility of the MSP’s customers to include in their reviews. Include information about which of the MSP’s IP addresses are scanned as part of the MSP’s quarterly vulnerability scans, and which IP addresses are the responsibility of the MSP’s customers to include in their own quarterly scans:

▪ Identify whether the entity being assessed is a managed service provider. <b>(yes/no)</b>	
▪ <i>If “yes”:</i>	
– List the requirements that apply to the MSP and are included in this assessment.	
– List the requirements that are the responsibility of the MSP’s customers (and have not been included in this assessment).	
– Provide the name of the assessor who attests that the testing of these requirements and/or responsibilities of the MSP is accurately represented in the signed Attestation of Compliance.	
– Identify which of the MSP’s IP addresses are scanned as part of the MSP’s quarterly vulnerability scans.	
– Identify which of the MSP’s IP addresses are the responsibility of the MSP’s customers.	

#### 4.12 Disclosure summary for “In Place with Compensating Control” responses

▪ Identify whether there were any responses indicated as “In Place with Compensating Control.” <b>(yes/no)</b>	
▪ <i>If “yes,” complete the table below:</i>	

List of all requirements/testing procedures with this result	Summary of the issue (legal obligation, etc.)

#### 4.13 Disclosure summary for “Not Tested” responses

▪ Identify whether there were any responses indicated as “Not Tested”: <b>(yes/no)</b>	
▪ <i>If “yes,” complete the table below:</i>	

<b>List of all requirements/testing procedures with this result</b>	<b>Summary of the issue</b> (for example, not deemed in scope for the assessment, etc.)

## 5. Quarterly Scan Results

### 5.1 Quarterly scan results

- Is this the assessed entity's initial PCI DSS compliance validation? **(yes/no)**

- Identify how many external quarterly ASV scans were performed within the last 12 months:

- Summarize the four most recent quarterly ASV scan results in the Summary Overview as well as in comments at Requirement 11.2.2.

**Note:** It is not required that four passing quarterly scans must be completed for initial PCI DSS compliance if the assessor verified:

- The most recent scan result was a passing scan,
- The entity has documented policies and procedures requiring quarterly scanning going forward, and
- Any vulnerabilities noted in the initial scan have been corrected as shown in a re-scan.

For subsequent years after the initial PCI DSS review, four passing quarterly scans must have occurred.

- For each quarterly ASV scan performed within the last 12 months, identify:

Date of the scan(s)	Name of ASV that performed the scan	Were any vulnerabilities found that resulted in a failed initial scan? (yes/no)	For all scans resulting in a Fail, provide date(s) of re-scans showing that the vulnerabilities have been corrected

**If this is the initial PCI DSS compliance validation, complete the following:**

- Provide the name of the assessor who attests that the most recent scan result was verified to be a passing scan.
- Identify the name of the document the assessor verified to include the entity's documented policies and procedures requiring quarterly scanning going forward.
- Describe how the assessor verified that any vulnerabilities noted in the initial scan have been corrected, as shown in a re-scan.

Assessor comments, if applicable:

## 5.2 Attestations of scan compliance

Scan must cover all externally accessible (Internet-facing) IP addresses in existence at the entity, in accordance with the *PCI DSS Approved Scanning Vendors (ASV) Program Guide*.

Provide the name of the assessor who attests that the ASV and the entity have completed the Attestations of Scan Compliance confirming that all externally accessible (Internet-facing) IP addresses in existence at the entity were appropriately scoped for the ASV scans:	
--	--

## 6. Findings and Observations

### Build and Maintain a Secure Network and Systems

#### Requirement 1: Install and maintain a firewall configuration to protect cardholder data

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
1.1 Establish and implement firewall and router configuration standards that include the following:							
1.1 Inspect the firewall and router configuration standards and other documentation specified below and verify that standards are complete and implemented as follows:							
1.1.1 A formal process for approving and testing all network connections and changes to the firewall and router configurations.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.1.1.a Examine documented procedures to verify there is a formal process for testing and approval of all: <ul style="list-style-type: none"> <li>• Network connections, and</li> <li>• Changes to firewall and router configurations.</li> </ul>	<b>Identify the document(s)</b> reviewed to verify procedures define the formal processes for:						
	• Testing and approval of all network connections.	<Report Findings Here>					
	• Testing and approval of all changes to firewall and router configurations.	<Report Findings Here>					
1.1.1.b For a sample of network connections, interview responsible personnel and examine records to verify that network connections were approved and tested.	<b>Identify the sample of records</b> for network connections that were selected for this testing procedure.		<Report Findings Here>				
	<b>Identify the responsible personnel</b> interviewed who confirm that network connections were approved and tested.		<Report Findings Here>				
	<b>Describe how</b> the sampled records verified that network connections were:						
	• Approved	<Report Findings Here>					
	• Tested	<Report Findings Here>					
1.1.1.c Identify a sample of actual changes made to firewall and router configurations, compare to the change records, and interview responsible personnel to verify the changes were approved and tested.	<b>Identify the sample of records</b> for firewall and router configuration changes that were selected for this testing procedure.		<Report Findings Here>				
	<b>Identify the responsible personnel</b> interviewed who confirm that changes made to firewall and router configurations were approved and tested.		<Report Findings Here>				
	<b>Describe how</b> the sampled records verified that the firewall and router configuration changes were:

	<ul style="list-style-type: none"> <li>Approved</li> </ul>	<Report Findings Here>					
	<ul style="list-style-type: none"> <li>Tested</li> </ul>	<Report Findings Here>					
<b>1.1.2</b> Current diagram that identifies all connections between the cardholder data environment and other networks, including any wireless networks.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>1.1.2.a</b> Examine diagram(s) and observe network configurations to verify that a current network diagram exists and that it documents all connections to the cardholder data environment, including any wireless networks.	<b>Identify the current network diagram(s)</b> examined.	<Report Findings Here>					
	<b>Describe how</b> network configurations verified that the diagram:						
	<ul style="list-style-type: none"> <li>Is current.</li> </ul>	<Report Findings Here>					
	<ul style="list-style-type: none"> <li>Includes all connections to cardholder data.</li> </ul>	<Report Findings Here>					
	<ul style="list-style-type: none"> <li>Includes any wireless network connections.</li> </ul>	<Report Findings Here>					
<b>1.1.2.b</b> Interview responsible personnel to verify that the diagram is kept current.	<b>Identify the responsible personnel</b> interviewed who confirm that the diagram is kept current.	<Report Findings Here>					
<b>1.1.3</b> Current diagram that shows all cardholder data flows across systems and networks.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>1.1.3.a</b> Examine data flow diagram and interview personnel to verify the diagram: <ul style="list-style-type: none"> <li>Shows all cardholder data flows across systems and networks.</li> <li>Is kept current and updated as needed upon changes to the environment.</li> </ul>	<b>Identify the data-flow diagram(s)</b> examined.	<Report Findings Here>					
	<ul style="list-style-type: none"> <li>Shows all cardholder data flows across systems and networks.</li> <li>Is kept current and updated as needed upon changes to the environment.</li> </ul>	<b>Identify the responsible personnel</b> interviewed who confirm that the diagram: <ul style="list-style-type: none"> <li>Shows all cardholder data flows across systems and networks.</li> <li>Is kept current and updated as needed upon changes to the environment.</li> </ul>	<Report Findings Here>				
<b>1.1.4</b> Requirements for a firewall at each Internet connection and between any demilitarized zone (DMZ) and the internal network zone.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>1.1.4.a</b> Examine the firewall configuration standards and verify that they include requirements for a firewall at each Internet connection and between any DMZ and the internal network zone.	<b>Identify the firewall configuration standards document</b> examined to verify requirements for a firewall: <ul style="list-style-type: none"> <li>At each Internet connection.</li> <li>Between any DMZ and the internal network zone.</li> </ul>	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
1.1.4.b Verify that the current network diagram is consistent with the firewall configuration standards.	<b>Provide the name of the assessor</b> who attests that the current network diagram is consistent with the firewall configuration standards.	<Report Findings Here>					
1.1.4.c Observe network configurations to verify that a firewall is in place at each Internet connection and between any demilitarized zone (DMZ) and the internal network zone, per the documented configuration standards and network diagrams.	<b>Describe how</b> network configurations verified that, per the documented configuration standards and network diagrams, a firewall is in place:						
	• At each Internet connection.	<Report Findings Here>					
	• Between any DMZ and the internal network zone.	<Report Findings Here>					
1.1.5 Description of groups, roles, and responsibilities for management of network components.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.1.5.a Verify that firewall and router configuration standards include a description of groups, roles, and responsibilities for management of network components.	<b>Identify the firewall and router configuration standards document(s)</b> reviewed to verify they include a description of groups, roles and responsibilities for management of network components.	<Report Findings Here>					
1.1.5.b Interview personnel responsible for management of network components to confirm that roles and responsibilities are assigned as documented.	<b>Identify the responsible personnel</b> interviewed who confirm that roles and responsibilities are assigned as documented.	<Report Findings Here>					
1.1.6 Documentation of business justification and approval for use of all services, protocols, and ports allowed, including documentation of security features implemented for those protocols considered to be insecure.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.1.6.a Verify that firewall and router configuration standards include a documented list of all services, protocols and ports, including business justification and approval for each.	<b>Identify the firewall and router configuration standards document(s)</b> reviewed to verify the document(s) contains a list of all services, protocols and ports necessary for business, including a business justification and approval for each.	<Report Findings Here>					
1.1.6.b Identify insecure services, protocols, and ports allowed; and verify	<b>Indicate whether</b> any insecure services, protocols or ports are allowed. <b>(yes/no)</b>	<Report Findings Here>					
	<i>If "yes," complete the instructions below for EACH insecure service, protocol, and port allowed: (add rows as needed)</i>						

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
that security features are documented for each service.	<b>Identify the firewall and router configuration standards document(s)</b> reviewed to verify that security features are documented for each insecure service/protocol/port.	<Report Findings Here>					
<b>1.1.6.c</b> Examine firewall and router configurations to verify that the documented security features are implemented for each insecure service, protocol, and port.	<i>If "yes" at 1.1.6.b, complete the following for each insecure service, protocol, and/or port present (add rows as needed):</i> <b>Describe how</b> firewall and router configurations verified that the documented security features are implemented for each insecure service, protocol and/or port.	<Report Findings Here>					
<b>1.1.7</b> Requirement to review firewall and router rule sets at least every six months.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>1.1.7.a</b> Verify that firewall and router configuration standards require review of firewall and router rule sets at least every six months.	<b>Identify the firewall and router configuration standards document(s)</b> reviewed to verify they require a review of firewall rule sets at least every six months.	<Report Findings Here>					
<b>1.1.7.b</b> Examine documentation relating to rule set reviews and interview responsible personnel to verify that the rule sets are reviewed at least every six months.	<b>Identify the document(s) relating to rule set reviews</b> that were examined to verify that rule sets are reviewed at least every six months for firewall and router rule sets.	<Report Findings Here>					
	<b>Identify the responsible personnel</b> interviewed who confirm that rule sets are reviewed at least every six months for firewall and router rule sets.	<Report Findings Here>					
<b>1.2</b> Build firewall and router configurations that restrict connections between untrusted networks and any system components in the cardholder data environment. <b>Note:</b> An "untrusted network" is any network that is external to the networks belonging to the entity under review, and/or which is out of the entity's ability to control or manage.							
<b>1.2</b> Examine firewall and router configurations and perform the following to verify that connections are restricted between untrusted networks and system components in the cardholder data environment:							
<b>1.2.1</b> Restrict inbound and outbound traffic to that which is necessary for the cardholder data environment, and specifically deny all other traffic.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
1.2.1.a Examine firewall and router configuration standards to verify that they identify inbound and outbound traffic necessary for the cardholder data environment.	<b>Identify the firewall and router configuration standards document(s)</b> reviewed to verify they identify inbound and outbound traffic necessary for the cardholder data environment.	<Report Findings Here>					
1.2.1.b Examine firewall and router configurations to verify that inbound and outbound traffic is limited to that which is necessary for the cardholder data environment.	<b>Describe how</b> firewall and router configurations verified that the following traffic is limited to that which is necessary for the cardholder data environment:						
	<ul style="list-style-type: none"> <li>Inbound traffic</li> </ul>	<Report Findings Here>					
1.2.1.c Examine firewall and router configurations to verify that all other inbound and outbound traffic is specifically denied, for example by using an explicit "deny all" or an implicit deny after allow statement.	<b>Describe how</b> firewall and router configurations verified that the following is specifically denied:						
	<ul style="list-style-type: none"> <li>All other inbound traffic</li> </ul>	<Report Findings Here>					
	<ul style="list-style-type: none"> <li>All other outbound traffic</li> </ul>	<Report Findings Here>					
1.2.2 Secure and synchronize router configuration files.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.2.2.a Examine router configuration files to verify they are secured from unauthorized access.	<b>Describe how</b> router configuration files are secured from unauthorized access.	<Report Findings Here>					
1.2.2.b Examine router configurations to verify they are synchronized—for example, the running (or active) configuration matches the start-up configuration (used when machines are booted).	<b>Describe how</b> router configurations are synchronized.	<Report Findings Here>					
1.2.3 Install perimeter firewalls between all wireless networks and the cardholder data environment, and configure these firewalls to deny or, if traffic is necessary for business purposes, permit only authorized traffic between the wireless environment and the cardholder data environment.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.2.3.a Examine firewall and router configurations to verify that there are perimeter firewalls installed between all wireless networks and the cardholder data environment.	<b>Describe how</b> firewall and router configurations verified that perimeter firewalls are in place between all wireless networks and the cardholder data environment.	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<b>1.2.3.b</b> Verify that the firewalls deny or, if traffic is necessary for business purposes, permit only authorized traffic between the wireless environment and the cardholder data environment.	<b>Indicate whether</b> traffic between the wireless environment and the cardholder data environment is necessary for business purposes. <b>(yes/no)</b>	<Report Findings Here>					
	<i>If "no":</i> <b>Describe how</b> firewall and/or router configurations verified that firewalls deny all traffic from any wireless environment into the cardholder environment.	<Report Findings Here>					
	<i>If "yes":</i> <b>Describe how</b> firewall and/or router configurations verified that firewalls permit only authorized traffic from any wireless environment into the cardholder environment.	<Report Findings Here>					
<b>1.3</b> Prohibit direct public access between the Internet and any system component in the cardholder data environment.							
<b>1.3</b> Examine firewall and router configurations—including but not limited to the choke router at the Internet, the DMZ router and firewall, the DMZ cardholder segment, the perimeter router, and the internal cardholder network segment—and perform the following to determine that there is no direct access between the Internet and system components in the internal cardholder network segment:							
<b>1.3.1</b> Implement a DMZ to limit inbound traffic to only system components that provide authorized publicly accessible services, protocols, and ports.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>1.3.1</b> Examine firewall and router configurations to verify that a DMZ is implemented to limit inbound traffic to only system components that provide authorized publicly accessible services, protocols, and ports.	<b>Describe how</b> firewall and router configurations verified that the DMZ is implemented to limit inbound traffic to only system components that provide authorized publicly accessible services, protocols, and ports.	<Report Findings Here>					
<b>1.3.2</b> Limit inbound Internet traffic to IP addresses within the DMZ.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>1.3.2</b> Examine firewall and router configurations to verify that inbound Internet traffic is limited to IP addresses within the DMZ.	<b>Describe how</b> firewall and router configurations verified that configurations limit inbound Internet traffic to IP addresses within the DMZ.	<Report Findings Here>					
<b>1.3.3</b> Implement anti-spoofing measures to detect and block forged source IP addresses from entering the network. <i>(For example, block traffic originating from the Internet with an internal source address)</i>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
1.3.3 Examine firewall and router configurations to verify that anti-spoofing measures are implemented, for example internal addresses cannot pass from the Internet into the DMZ.	Describe how firewall and router configurations verified that anti-spoofing measures are implemented.	<Report Findings Here>					
1.3.4 Do not allow unauthorized outbound traffic from the cardholder data environment to the Internet.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.3.4 Examine firewall and router configurations to verify that outbound traffic from the cardholder data environment to the Internet is explicitly authorized.	Describe how firewall and router configurations verified that outbound traffic from the cardholder data environment to the Internet is explicitly authorized.	<Report Findings Here>					
1.3.5 Permit only "established" connections into the network.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.3.5 Examine firewall and router configurations to verify that the firewall permits only established connections into internal network, and denies any inbound connections not associated with a previously established session.	Describe how firewall and router configurations verified that the firewall permits only established connections into internal network, and denies any inbound connections not associated with a previously established session	<Report Findings Here>					
1.3.6 Place system components that store cardholder data (such as a database) in an internal network zone, segregated from the DMZ and other untrusted networks.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1.3.6 Examine firewall and router configurations to verify that system components that store cardholder data are on an internal network zone, segregated from the DMZ and other untrusted networks.	Indicate whether any system components store cardholder data. (yes/no)	<Report Findings Here>					
	If "yes": Describe how firewall and router configurations verified that the system components that store cardholder data are located on an internal network zone, and are segregated from the DMZ and other untrusted networks.	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<b>1.3.7</b> Do not disclose private IP addresses and routing information to unauthorized parties. Note: Methods to obscure IP addressing may include, but are not limited to: <ul style="list-style-type: none"> <li>• Network Address Translation (NAT),</li> <li>• Placing servers containing cardholder data behind proxy servers/firewalls,</li> <li>• Removal or filtering of route advertisements for private networks that employ registered addressing,</li> <li>• Internal use of RFC1918 address space instead of registered addresses.</li> </ul>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>1.3.7.a</b> Examine firewall and router configurations to verify that methods are in place to prevent the disclosure of private IP addresses and routing information from internal networks to the Internet.	<b>Describe how</b> firewall and router configurations verified that methods are in place to prevent the disclosure of private IP addresses and routing information from internal networks to the Internet.	<Report Findings Here>					
<b>1.3.7.b</b> Interview personnel and examine documentation to verify that any disclosure of private IP addresses and routing information to external entities is authorized.	<b>Identify the document</b> reviewed that specifies whether any disclosure of private IP addresses and routing information to external parties is permitted.	<Report Findings Here>					
	For each permitted disclosure, <b>identify the responsible personnel</b> interviewed who confirm that the disclosure is authorized.	<Report Findings Here>					
<b>1.4</b> Install personal firewall software or equivalent functionality on any portable computing devices (including company and/or employee/owned) that connect to the Internet when outside the network (for example, laptops used by employees), and which are also used to access the CDE. Firewall (or equivalent) configurations include: <ul style="list-style-type: none"> <li>• Specific configuration settings are defined.</li> <li>• Personal firewall (or equivalent functionality) is actively running.</li> <li>• Personal firewall (or equivalent functionality) is not alterable by users of the portable computing devices.</li> </ul>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

	For each disk encryption mechanism in use, describe how the authentication process was observed to verify that logical access to encrypted file systems is separate from the native operating system's authentication mechanism.	<Report Findings Here>					
3.4.1.b Observe processes and interview personnel to verify that cryptographic keys are stored securely (for example, stored on removable media that is adequately protected with strong access controls).	Describe how processes were observed to verify that cryptographic keys are stored securely.	<Report Findings Here>					
	Identify the responsible personnel interviewed who confirm that cryptographic keys are stored securely.	<Report Findings Here>					
3.4.1.c Examine the configurations and observe the processes to verify that cardholder data on removable media is encrypted wherever stored.  <i>Note: If disk encryption is not used to encrypt removable media, the data stored on this media will need to be rendered unreadable through some other method.</i>	Describe how the configurations verified that cardholder data on removable media is encrypted wherever stored.	<Report Findings Here>					
	Describe how processes were observed to verify that cardholder data on removable media is encrypted wherever stored.	<Report Findings Here>					
3.5 Document and implement procedures to protect keys used to secure stored cardholder data against disclosure and misuse:  <i>Note: This requirement applies to keys used to encrypt stored cardholder data, and also applies to key-encrypting keys used to protect data-encrypting keys—such key-encrypting keys must be at least as strong as the data-encrypting key.</i>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

<ul style="list-style-type: none"> <li>Key-encrypting keys are at least as strong as the data-encrypting keys they protect.</li> <li>Key-encrypting keys are stored separately from data-encrypting keys.</li> </ul>	<ul style="list-style-type: none"> <li>Key-encrypting keys are stored separately from data-encrypting keys.</li> </ul>	<Report Findings Here>					
3.5.4 Store cryptographic keys in the fewest possible locations.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.5.4 Examine key storage locations and observe processes to verify that keys are stored in the fewest possible locations.	<b>Describe how</b> key storage locations and the observed processes verified that keys are stored in the fewest possible locations.	<Report Findings Here>					
3.6 Fully document and implement all key-management processes and procedures for cryptographic keys used for encryption of cardholder data, including the following: <i>Note: Numerous industry standards for key management are available from various resources including NIST, which can be found at <a href="http://csrc.nist.gov">http://csrc.nist.gov</a>.</i>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.6.a <b>Additional Procedure for service provider assessments only.</b> If the service provider shares keys with their customers for transmission or storage of cardholder data, examine the documentation that the service provider provides to their customers to verify that it includes guidance on how to securely transmit, store, and update customers' keys, in accordance with Requirements 3.6.1 through 3.6.8 below.	<b>Indicate whether</b> the assessed entity is a service provider that shares keys with their customers for transmission or storage of cardholder data. <b>(yes/no)</b>	<Report Findings Here>					
	<i>If "yes," Identify the document</i> that the service provider provides to their customers examined to verify that it includes guidance on how to securely transmit, store and update customers' keys, in accordance with Requirements 3.6.1 through 3.6.8 below.	<Report Findings Here>					
3.6.b Examine the key-management procedures and processes for keys used for encryption of cardholder data and perform the following:							
3.6.1 Generation of strong cryptographic keys.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3.6.1.a Verify that key-management procedures specify how to generate strong keys.	<b>Identify the documented key-management procedures</b> examined to verify procedures specify how to generate strong keys.	<Report Findings Here>					
3.6.1.b Observe the procedures for generating keys to verify that strong keys are generated.	<b>Describe how</b> the procedures for generating keys were observed to verify that strong keys are generated.	<Report Findings Here>					
3.6.2 Secure cryptographic key distribution.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<b>3.6.2.a</b> Verify that key-management procedures specify how to securely distribute keys.	<b>Identify the documented key-management procedures</b> examined to verify procedures specify how to securely distribute keys.	<Report Findings Here>					
<b>3.6.2.b</b> Observe the method for distributing keys to verify that keys are distributed securely.	<b>Describe how</b> the method for distributing keys was observed to verify that keys are distributed securely.	<Report Findings Here>					
<b>3.6.3</b> Secure cryptographic key storage.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>3.6.3.a</b> Verify that key-management procedures specify how to securely store keys.	<b>Identify the documented key-management procedures</b> examined to verify procedures specify how to securely store keys.	<Report Findings Here>					
<b>3.6.3.b</b> Observe the method for storing keys to verify that keys are stored securely.	<b>Describe how</b> the method for storing keys was observed to verify that keys are stored securely.	<Report Findings Here>					
<b>3.6.4</b> Cryptographic key changes for keys that have reached the end of their cryptoperiod (for example, after a defined period of time has passed and/or after a certain amount of cipher-text has been produced by a given key), as defined by the associated application vendor or key owner, and based on industry best practices and guidelines (for example, NIST Special Publication 800-57).			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>3.6.4.a</b> Verify that key-management procedures include a defined cryptoperiod for each key type in use and define a process for key changes at the end of the defined cryptoperiod(s).	<b>Identify the documented key-management procedures</b> examined to verify procedures include a defined cryptoperiod for each key type in use and define a process for key changes at the end of the defined cryptoperiod(s).	<Report Findings Here>					
<b>3.6.4.b</b> Interview personnel to verify that keys are changed at the end of the defined cryptoperiod(s).	<b>Identify the responsible personnel interviewed</b> who confirm that keys are changed at the end of the defined cryptoperiod(s).	<Report Findings Here>					
<b>3.6.5</b> Retirement or replacement (for example, archiving, destruction, and/or revocation) of keys as deemed necessary when the integrity of the key has been weakened (for example, departure of an employee with knowledge of a clear-text key component), or keys are suspected of being compromised. <i>Note: If retired or replaced cryptographic keys need to be retained, these keys must be securely archived (for example, by using a key-encryption key). Archived cryptographic keys should only be used for decryption/verification purposes.</i>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<p><b>3.6.5.a</b> Verify that key-management procedures specify processes for the following:</p> <ul style="list-style-type: none"> <li>The retirement or replacement of keys when the integrity of the key has been weakened.</li> <li>The replacement of known or suspected compromised keys.</li> <li>Any keys retained after retiring or replacing are not used for encryption operations.</li> </ul>	<p><b>Identify the documented key-management procedures</b> examined to verify that key-management processes specify the following:</p> <ul style="list-style-type: none"> <li>The retirement or replacement of keys when the integrity of the key has been weakened.</li> <li>The replacement of known or suspected compromised keys.</li> <li>Any keys retained after retiring or replacing are not used for encryption operations.</li> </ul>	<Report Findings Here>					
<p><b>3.6.5.b</b> Interview personnel to verify the following processes are implemented:</p> <ul style="list-style-type: none"> <li>Keys are retired or replaced as necessary when the integrity of the key has been weakened, including when someone with knowledge of the key leaves the company.</li> <li>Keys are replaced if known or suspected to be compromised.</li> <li>Any keys retained after retiring or replacing are not used for encryption operations.</li> </ul>	<p><b>Identify the responsible personnel</b> interviewed who confirm that the following processes are implemented:</p> <ul style="list-style-type: none"> <li>Keys are retired or replaced as necessary when the integrity of the key has been weakened, including when someone with knowledge of the key leaves the company.</li> <li>Keys are replaced if known or suspected to be compromised.</li> <li>Any keys retained after retiring or replacing are not used for encryption operations.</li> </ul>	<Report Findings Here>					
<p><b>3.6.6</b> If manual clear-text cryptographic key-management operations are used, these operations must be managed using split knowledge and dual control.</p> <p><b>Note:</b> Examples of manual key-management operations include, but are not limited to: key generation, transmission, loading, storage and destruction.</p>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>3.6.6.a</b> Verify that manual clear-text key-management procedures specify processes for the use of the following:</p> <ul style="list-style-type: none"> <li>Split knowledge of keys, such that key components are under the control of at</li> </ul>	<p><b>Indicate whether</b> manual clear-text cryptographic key-management operations are used. <b>(yes/no)</b></p> <p><i>If "no," mark the remainder of 3.6.6.a and 3.6.6.b as "Not Applicable."</i></p> <p><i>If "yes," complete 3.6.6.a and 3.6.6.b.</i></p>	<Report Findings Here>

	<ul style="list-style-type: none"> <li>Split knowledge</li> </ul>	<Report Findings Here>					
	<ul style="list-style-type: none"> <li>Dual Control</li> </ul>	<Report Findings Here>					
<p><b>3.6.7</b> Prevention of unauthorized substitution of cryptographic keys.</p>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>3.6.7.a</b> Verify that key-management procedures specify processes to prevent unauthorized substitution of keys.</p>	<p><b>Identify the documented key-management procedures</b> examined to verify that key-management procedures specify processes to prevent unauthorized substitution of keys.</p>	<Report Findings Here>					
<p><b>3.6.7.b</b> Interview personnel and/or observe process to verify that unauthorized substitution of keys is prevented.</p>	<p><b>Identify the responsible personnel</b> interviewed for this testing procedure, if applicable.</p>	<Report Findings Here>					
	<p>For the interview, <b>summarize the relevant details discussed and/or describe how</b> processes were observed to verify that unauthorized substitution of keys is prevented.</p>						<Report Findings Here>
<p><b>3.6.8</b> Requirement for cryptographic key custodians to formally acknowledge that they understand and accept their key-custodian responsibilities.</p>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<b>3.6.8.a</b> Verify that key-management procedures specify processes for key custodians to acknowledge (in writing or electronically) that they understand and accept their key-custodian responsibilities.	<b>Identify the documented key-management procedures</b> examined to verify that key-management procedures specify processes for key custodians to acknowledge that they understand and accept their key-custodian responsibilities.	<Report Findings Here>					
<b>3.6.8.b</b> Observe documentation or other evidence showing that key custodians have acknowledged (in writing or electronically) that they understand and accept their key-custodian responsibilities.	<b>Describe how</b> key custodian acknowledgements or other evidence were observed to verify that key custodians have acknowledged that they understand and accept their key-custodian responsibilities.	<Report Findings Here>					
<b>3.7</b> Ensure that security policies and operational procedures for protecting stored cardholder data are documented, in use, and known to all affected parties.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>3.7</b> Examine documentation and interview personnel to verify that security policies and operational procedures for protecting stored cardholder data are: <ul style="list-style-type: none"> <li>• Documented,</li> <li>• In use, and</li> <li>• Known to all affected parties</li> </ul>	<b>Identify the document</b> reviewed to verify that security policies and operational procedures for protecting stored cardholder data are documented.	<Report Findings Here>					
	<b>Identify the responsible personnel</b> interviewed who confirm that the above documented security policies and operational procedures for protecting stored cardholder data are: <ul style="list-style-type: none"> <li>• In use</li> <li>• Known to all affected parties</li> </ul>	<Report Findings Here>					

**Requirement 4: Encrypt transmission of cardholder data across open, public networks**

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
<p><b>4.1</b> Use strong cryptography and security protocols to safeguard sensitive cardholder data during transmission over open, public networks, including the following:</p> <ul style="list-style-type: none"> <li>Only trusted keys and certificates are accepted.</li> <li>The protocol in use only supports secure versions or configurations.</li> <li>The encryption strength is appropriate for the encryption methodology in use.</li> </ul> <p><i>Examples of open, public networks include but are not limited to:</i></p> <ul style="list-style-type: none"> <li>The Internet</li> <li>Wireless technologies, including 802.11 and Bluetooth</li> <li>Cellular technologies, for example, Global System for Mobile communications (GSM), Code division multiple access (CDMA)</li> <li>General Packet Radio Service (GPRS)</li> <li>Satellite communications</li> </ul>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>4.1.a</b> Identify all locations where cardholder data is transmitted or received over open, public networks. Examine documented standards and compare to system configurations to verify the use of security protocols and strong cryptography for all locations.</p>	<p><b>Identify</b> all locations where cardholder data is transmitted or received over open, public networks.</p>	<Report Findings Here>					
	<p><b>Identify the documented standards</b> examined.</p>	<Report Findings Here>					
	<p><b>Describe how</b> the documented standards and system configurations both verified the use of:</p>						
	<ul style="list-style-type: none"> <li>Security protocols for all locations</li> <li>Strong cryptography for all locations</li> </ul>	<Report Findings Here>					
<p><b>4.1.b</b> Review documented policies and procedures to verify processes are specified for the following:</p> <ul style="list-style-type: none"> <li>For acceptance of only trusted keys and/or certificates.</li> <li>For the protocol in use to only support secure versions and configurations (that insecure versions or configurations are not supported).</li> <li>For implementation of proper encryption strength per the encryption methodology in use.</li> </ul>	<p><b>Identify the document</b> reviewed to verify that processes are specified for the following:</p> <ul style="list-style-type: none"> <li>For acceptance of only trusted keys and/or certificates.</li> <li>For the protocol in use to only support secure versions and configurations (that insecure versions or configurations are not supported).</li> <li>For implementation of proper encryption strength per the encryption methodology in use.</li> </ul>	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
<b>4.1.c</b> Select and observe a sample of inbound and outbound transmissions as they occur (for example, by observing system processes or network traffic) to verify that all cardholder data is encrypted with strong cryptography during transit.	<b>Describe the sample</b> of inbound and outbound transmissions that were observed as they occurred.	<Report Findings Here>					
	<b>Describe how</b> the sample of inbound and outbound transmissions verified that all cardholder data is encrypted with strong cryptography during transit.	<Report Findings Here>					
<b>4.1.d</b> Examine keys and certificates to verify that only trusted keys and/or certificates are accepted.	<i>For all instances where cardholder data is transmitted or received over open, public networks:</i>						
	<b>Describe the mechanisms</b> used to ensure that only trusted keys and/or certificates are accepted.	<Report Findings Here>					
	<b>Describe how</b> the mechanisms were observed to accept only trusted keys and/or certificates.	<Report Findings Here>					
<b>4.1.e</b> Examine system configurations to verify that the protocol is implemented to use only secure configurations and does not support insecure versions or configurations.	<i>For all instances where cardholder data is transmitted or received over open, public networks, describe how system configurations verified that the protocol:</i>						
	<ul style="list-style-type: none"> <li>Is implemented to use only secure configurations.</li> </ul>	<Report Findings Here>					
	<ul style="list-style-type: none"> <li>Does not support insecure versions or configurations.</li> </ul>	<Report Findings Here>					
<b>4.1.f</b> Examine system configurations to verify that the proper encryption strength is implemented for the encryption methodology in use. (Check vendor recommendations/best practices.)	<i>For each encryption methodology in use,</i>						
	<b>Identify</b> vendor recommendations/best practices for encryption strength.	<Report Findings Here>					
	<b>Identify</b> the encryption strength observed to be implemented.	<Report Findings Here>					
<b>4.1.g</b> For TLS implementations, examine system configurations to verify that TLS is enabled whenever cardholder data is transmitted or received.  <i>For example, for browser-based implementations:</i> <ul style="list-style-type: none"> <li>"HTTPS" appears as the browser Universal Record Locator (URL) protocol; and</li> <li>Cardholder data is only requested if "HTTPS" appears as part of the URL.</li> </ul>	<b>Indicate whether</b> TLS is implemented to encrypt cardholder data over open, public networks. <b>(yes/no)</b> <i>If 'no,' mark the remainder of 4.1.g as 'not applicable.'</i>	<Report Findings Here>					
	<i>If "yes," for all instances where TLS is used to encrypt cardholder data over open, public networks, describe how system configurations verified that TLS is enabled whenever cardholder data is transmitted or received.</i>	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
4.1.1 Ensure wireless networks transmitting cardholder data or connected to the cardholder data environment, use industry best practices to implement strong encryption for authentication and transmission.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.1.1 Identify all wireless networks transmitting cardholder data or connected to the cardholder data environment. Examine documented standards and compare to system configuration settings to verify the following for all wireless networks identified: <ul style="list-style-type: none"> <li>Industry best practices are used to implement strong encryption for authentication and transmission.</li> <li>Weak encryption (for example, WEP, SSL) is not used as a security control for authentication or transmission.</li> </ul>	Identify all wireless networks transmitting cardholder data or connected to the cardholder data environment.	<Report Findings Here>					
	Identify the documented standards examined.	<Report Findings Here>					
	Describe how the documented standards and system configuration settings both verified the following for all wireless networks identified:						
	<ul style="list-style-type: none"> <li>Industry best practices are used to implement strong encryption for authentication and transmission.</li> </ul>	<Report Findings Here>					
	<ul style="list-style-type: none"> <li>Weak encryption is not used as a security control for authentication or transmission.</li> </ul>	<Report Findings Here>					
4.2 Never send unprotected PANs by end-user messaging technologies (for example, e-mail, instant messaging, SMS, chat, etc.).			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.2.a If end-user messaging technologies are used to send cardholder data, observe processes for sending PAN and examine a sample of outbound transmissions as they occur to verify that PAN is rendered unreadable or secured with strong cryptography whenever it is sent via end-user messaging technologies.	Indicate whether end-user messaging technologies are used to send cardholder data. (yes/no)	<Report Findings Here>					
	<i>If "no," mark the remainder of 4.2.a as "Not Applicable" and proceed to 4.2.b. If "yes," complete the following:</i>						
	Describe how processes for sending PAN were observed to verify that PAN is rendered unreadable or secured with strong cryptography whenever it is sent via end-user messaging technologies.	<Report Findings Here>					
	Describe the sample of outbound transmissions that were observed as they occurred.	<Report Findings Here>					
	Describe how the sample of outbound transmissions verified that PAN is rendered unreadable or secured with strong cryptography whenever it is sent via end-user messaging technologies.	<Report Findings Here>

7.2.3 Confirm that the access control systems have a default "deny-all" setting.	<b>Describe how</b> system settings and the vendor documentation at 7.2.1 verified that access control systems have a default "deny-all" setting.	<Report Findings Here>					
7.3 Ensure that security policies and operational procedures for restricting access to cardholder data are documented, in use, and known to all affected parties.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7.3 Examine documentation and interview personnel to verify that security policies and operational procedures for restricting access to cardholder data are: <ul style="list-style-type: none"> <li>• Documented,</li> <li>• In use, and</li> <li>• Known to all affected parties.</li> </ul>	<b>Identify the document reviewed to</b> verify that security policies and operational procedures for restricting access to cardholder data are documented.	<Report Findings Here>					
	<b>Identify the responsible personnel</b> interviewed who confirm that the above documented security policies and operational procedures for restricting access to cardholder data are: <ul style="list-style-type: none"> <li>• In use</li> <li>• Known to all affected parties</li> </ul>	<Report Findings Here>					

**Requirement 8: Identify and authenticate access to system components**

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
8.1 Define and implement policies and procedures to ensure proper user identification management for non-consumer users and administrators on all system components as follows:			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.1.a Review procedures and confirm they define processes for each of the items below at 8.1.1 through 8.1.8.	<b>Identify the written procedures for user identification management</b> examined to verify processes are defined for each of the items below at 8.1.1 through 8.1.8: <ul style="list-style-type: none"> <li>Assign all users a unique ID before allowing them to access system components or cardholder data.</li> <li>Control addition, deletion, and modification of user IDs, credentials, and other identifier objects.</li> <li>Immediately revoke access for any terminated users.</li> <li>Remove/disable inactive user accounts at least every 90 days.</li> <li>Manage IDs used by vendors to access, support, or maintain system components via remote access as follows:               <ul style="list-style-type: none"> <li>Enabled only during the time period needed and disabled when not in use.</li> <li>Monitored when in use.</li> </ul> </li> <li>Limit repeated access attempts by locking out the user ID after not more than six attempts.</li> <li>Set the lockout duration to a minimum of 30 minutes or until an administrator enables the user ID.</li> <li>If a session has been idle for more than 15 minutes, require the user to re-authenticate to re-activate the terminal or session.</li> </ul>	<Report Findings Here>					
8.1.b Verify that procedures are implemented for user identification management, by performing the following:							
8.1.1 Assign all users a unique ID before allowing them to access system components or cardholder data.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
8.1.1 Interview administrative personnel to confirm that all users are assigned a unique ID for access to system components or cardholder data.	Identify the responsible administrative personnel interviewed who confirm that all users are assigned a unique ID for access to system components or cardholder data.	<Report Findings Here>					
8.1.2 Control addition, deletion, and modification of user IDs, credentials, and other identifier objects.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.1.2 For a sample of privileged user IDs and general user IDs, examine associated authorizations and observe system settings to verify each user ID and privileged user ID has been implemented with only the privileges specified on the documented approval.	Identify the sample of privileged user IDs selected for this testing procedure.	<Report Findings Here>					
	Identify the sample of general user IDs selected for this testing procedure.	<Report Findings Here>					
	Describe how observed system settings and the associated authorizations verified that each ID has been implemented with only the privileges specified on the documented approval:						
	<ul style="list-style-type: none"> <li>For the sample of privileged user IDs.</li> </ul>	<Report Findings Here>					
	<ul style="list-style-type: none"> <li>For the sample of general user IDs.</li> </ul>	<Report Findings Here>					
8.1.3 Immediately revoke access for any terminated users.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.1.3.a Select a sample of users terminated in the past six months, and review current user access lists—for both local and remote access—to verify that their IDs have been deactivated or removed from the access lists.	Identify the sample of users terminated in the past six months that were selected for this testing procedure.	<Report Findings Here>					
	Describe how the current user access lists for <b>local access</b> verified that the sampled user IDs have been deactivated or removed from the access lists.	<Report Findings Here>					
	Describe how the current user access lists for <b>remote access</b> verified that the sampled user IDs have been deactivated or removed from the access lists.	<Report Findings Here>					
8.1.3.b Verify all physical authentication methods—such as, smart cards, tokens, etc.—have been returned or deactivated.	For the sample of users terminated in the past six months at 8.1.3.a, describe how it was determined which, if any, physical authentication methods, the terminated users had access to prior to termination.	<Report Findings Here>					
	Describe how the physical authentication method(s) for the terminated employees were verified to have been returned or deactivated.	<Report Findings Here>

	<b>Identify the responsible personnel</b> interviewed who confirm that the above documented security policies and operational procedures for identification and authentication are: <ul style="list-style-type: none"> <li>• In use</li> <li>• Known to all affected parties</li> </ul>	<Report Findings Here>					

**Requirement 9: Restrict physical access to cardholder data**

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
9.1 Use appropriate facility entry controls to limit and monitor physical access to systems in the cardholder data environment.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>9.1 Verify the existence of physical security controls for each computer room, data center, and other physical areas with systems in the cardholder data environment.</p> <ul style="list-style-type: none"> <li>Verify that access is controlled with badge readers or other devices including authorized badges and lock and key.</li> <li>Observe a system administrator's attempt to log into consoles for randomly selected systems in the cardholder data environment and verify that they are "locked" to prevent unauthorized use.</li> </ul>	<p><b>Identify and briefly describe</b> all of the following with systems in the cardholder data environment:</p> <ul style="list-style-type: none"> <li>All computer rooms</li> <li>All data centers</li> <li>Any other physical areas</li> </ul>	<p>&lt;Report Findings Here&gt;</p>					
		<Report Findings Here>					
		<Report Findings Here>					
	<i>For each area identified (add rows as needed), complete the following:</i>						
	<b>Describe</b> the physical security controls observed to be in place, including authorized badges and lock and key.	<Report Findings Here>					
	<b>Identify</b> the randomly selected systems in the cardholder environment for which a system administrator login attempt was observed.	<Report Findings Here>					
<b>Describe how</b> consoles for the randomly selected systems were observed to be "locked" when not in use.	<Report Findings Here>						
<p>9.1.1 Use either video cameras or access control mechanisms (or both) to monitor individual physical access to sensitive areas. Review collected data and correlate with other entries. Store for at least three months, unless otherwise restricted by law.</p> <p><b>Note:</b> "Sensitive areas" refers to any data center, server room, or any area that houses systems that store, process, or transmit cardholder data. This excludes public-facing areas where only point-of-sale terminals are present, such as the cashier areas in a retail store.</p>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.1.1.a Verify that either video cameras or access control mechanisms (or both) are in place to monitor the entry/exit points to sensitive areas.	<b>Describe</b> either the video cameras or access control mechanisms (or both) observed to monitor the entry/exit points to sensitive areas.	<Report Findings Here>					
9.1.1.b Verify that either video cameras or access control mechanisms (or both) are protected from tampering or disabling.	<b>Describe how</b> either the video cameras or access control mechanisms (or both) were observed to be protected from tampering and/or disabling.	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
9.1.1.c Verify that data from video cameras and/or access control mechanisms is reviewed, and that data is stored for at least three months.	Describe how the data from video cameras and/or access control mechanisms were observed to be reviewed.	<Report Findings Here>					
	Describe how data was observed to be stored for at least three months.	<Report Findings Here>					
9.1.2 Implement physical and/or logical controls to restrict access to publicly accessible network jacks. <i>For example, network jacks located in public areas and areas accessible to visitors could be disabled and only enabled when network access is explicitly authorized. Alternatively, processes could be implemented to ensure that visitors are escorted at all times in areas with active network jacks.</i>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.1.2 Interview responsible personnel and observe locations of publicly accessible network jacks to verify that physical and/or logical controls are in place to restrict access to publicly accessible network jacks.	Identify the responsible personnel interviewed who confirm that physical and/or logical controls are in place to restrict access to publicly accessible network jacks.	<Report Findings Here>					
	Describe how physical and/or logical controls were observed to be in place to restrict access to publicly accessible network jacks.	<Report Findings Here>					
9.1.3 Restrict physical access to wireless access points, gateways, handheld devices, networking/communications hardware, and telecommunication lines.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.1.3 Verify that physical access to wireless access points, gateways, handheld devices, networking/communications hardware, and telecommunication lines is appropriately restricted.	Describe how physical access was observed to be restricted to the following:						
	• Wireless access points	<Report Findings Here>					
	• Wireless gateways	<Report Findings Here>					
	• Wireless handheld devices	<Report Findings Here>					
	• Network/communications hardware	<Report Findings Here>					
• Telecommunication lines	<Report Findings Here>						
9.2 Develop procedures to easily distinguish between onsite personnel and visitors, to include:							
<ul style="list-style-type: none"> <li>Identifying onsite personnel and visitors (for example, assigning badges).</li> <li>Changes to access requirements.</li> <li>Revoking or terminating onsite personnel and expired visitor identification (such as ID badges).</li> </ul>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
<b>9.2.a</b> Review documented processes to verify that procedures are defined for identifying and distinguishing between onsite personnel and visitors. Verify procedures include the following: <ul style="list-style-type: none"> <li>Identifying onsite personnel and visitors (for example, assigning badges),</li> <li>Changing access requirements, and</li> <li>Revoking terminated onsite personnel and expired visitor identification (such as ID badges).</li> </ul>	<b>Identify the documented processes</b> reviewed to verify that procedures are defined for identifying and distinguishing between onsite personnel and visitors, including the following: <ul style="list-style-type: none"> <li>Identifying onsite personnel and visitors (for example, assigning badges),</li> <li>Changing access requirements, and</li> <li>Revoking terminated onsite personnel and expired visitor identification (such as ID badges).</li> </ul>	<Report Findings Here>					
<b>9.2.b</b> Examine identification methods (such as ID badges) and observe processes for identifying and distinguishing between onsite personnel and visitors to verify that: <ul style="list-style-type: none"> <li>Visitors are clearly identified, and</li> <li>It is easy to distinguish between onsite personnel and visitors.</li> </ul>	<b>Identify</b> the identification methods examined.	<Report Findings Here>					
	<b>Describe how</b> processes for identifying and distinguishing between onsite personnel and visitors were observed to verify that:						
	<ul style="list-style-type: none"> <li>Visitors are clearly identified, and</li> <li>It is easy to distinguish between onsite personnel and visitors.</li> </ul>	<ul style="list-style-type: none"> <li>It is easy to distinguish between onsite personnel and visitors.</li> </ul>	<Report Findings Here>				
<b>9.2.c</b> Verify that access to the identification process (such as a badge system) is limited to authorized personnel.	<b>Describe how</b> access to the identification process was observed to be limited to authorized personnel.	<Report Findings Here>					
<b>9.3</b> Control physical access for onsite personnel to sensitive areas as follows: <ul style="list-style-type: none"> <li>Access must be authorized and based on individual job function.</li> <li>Access is revoked immediately upon termination, and all physical access mechanisms, such as keys, access cards, etc., are returned or disabled.</li> </ul>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.3.a</b> For a sample of onsite personnel with physical access to sensitive areas,	<b>Identify the sample</b> of responsible personnel interviewed for this testing procedure.	<Report Findings Here>					
	<b>For the interview, summarize the relevant details</b> discussed to verify that:						
	<ul style="list-style-type: none"> <li>Access to the sensitive area is authorized.</li> </ul>	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
interview responsible personnel and observe access control lists to verify that: <ul style="list-style-type: none"> <li>Access to the sensitive area is authorized.</li> <li>Access is required for the individual's job function.</li> </ul>	<ul style="list-style-type: none"> <li>Access is required for the individual's job function.</li> </ul>	<Report Findings Here>					
<b>9.3.b</b> Observe personnel accessing sensitive areas to verify that all personnel are authorized before being granted access.	<b>Describe how</b> personnel accessing sensitive areas were observed to verify that all personnel are authorized before being granted access.	<Report Findings Here>					
<b>9.3.c</b> Select a sample of recently terminated employees and review access control lists to verify the personnel do not have physical access to sensitive areas.	<b>Identify the sample</b> of users recently terminated.	<Report Findings Here>					
	<i>For all items in the sample, provide the name of the assessor</i> who attests that the access control lists were reviewed to verify the personnel do not have physical access to sensitive areas.	<Report Findings Here>					
<b>9.4</b> Implement procedures to identify and authorize visitors. Procedures should include the following:							
<b>9.4</b> Verify that visitor authorization and access controls are in place as follows:							
<b>9.4.1</b> Visitors are authorized before entering, and escorted at all times within, areas where cardholder data is processed or maintained.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.4.1.a</b> Observe procedures and interview personnel to verify that visitors must be authorized before they are granted access to, and escorted at all times within, areas where cardholder data is processed or maintained.	<b>Identify the documented procedures</b> examined to verify that visitors must be authorized before they are granted access to, and escorted at all times within, areas where cardholder data is processed or maintained.	<Report Findings Here>					
	<b>Identify the responsible personnel</b> interviewed who confirm that visitors must be authorized before they are granted access to, and escorted at all times within, areas where cardholder data is processed or maintained.	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
<b>9.4.1.b</b> Observe the use of visitor badges or other identification to verify that a physical token badge does not permit unescorted access to physical areas where cardholder data is processed or maintained.	<b>Describe how</b> the use of visitor badges or other identification was observed to verify that a physical token badge does not permit unescorted access to physical areas where cardholder data is processed or maintained.	<Report Findings Here>					
<b>9.4.2</b> Visitors are identified and given a badge or other identification that expires and that visibly distinguishes the visitors from onsite personnel.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.4.2.a</b> Observe people within the facility to verify the use of visitor badges or other identification, and that visitors are easily distinguishable from onsite personnel.	<b>Describe how</b> people within the facility were observed to use visitor badges or other identification.	<Report Findings Here>					
	<b>Describe how</b> visitors within the facility were observed to be easily distinguishable from onsite personnel.	<Report Findings Here>					
<b>9.4.2.b</b> Verify that visitor badges or other identification expire.	<b>Describe how</b> visitor badges or other identification were verified to expire.	<Report Findings Here>					
<b>9.4.3</b> Visitors are asked to surrender the badge or identification before leaving the facility or at the date of expiration.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.4.3</b> Observe visitors leaving the facility to verify visitors are asked to surrender their badge or other identification upon departure or expiration.	<b>Describe how</b> visitors leaving the facility were observed to verify they are asked to surrender their badge or other identification upon departure or expiration.	<Report Findings Here>					
<b>9.4.4</b> A visitor log is used to maintain a physical audit trail of visitor activity to the facility as well as for computer rooms and data centers where cardholder data is stored or transmitted. Document the visitor's name, the firm represented, and the onsite personnel authorizing physical access on the log. Retain this log for a minimum of three months, unless otherwise restricted by law.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.4.4.a</b> Verify that a visitor log is in use to record physical access to the facility as well as computer rooms and data centers where cardholder data is stored or transmitted.	<b>Describe how</b> it was observed that a visitor log is in use to record physical access to:						
	• The facility	<Report Findings Here>					
	• Computer rooms and data centers where cardholder data is stored or transmitted.	<Report Findings Here>

			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
<b>9.4.4.b</b> Verify that the log contains: <ul style="list-style-type: none"> <li>The visitor's name,</li> <li>The firm represented, and</li> <li>The onsite personnel authorizing physical access.</li> </ul>	<b>Provide the name of the assessor</b> who attests that the visitor log contains: <ul style="list-style-type: none"> <li>The visitor's name,</li> <li>The firm represented, and</li> <li>The onsite personnel authorizing physical access.</li> </ul>	<Report Findings Here>					
<b>9.4.4.c</b> Verify that the log is retained for at least three months.	<b>Describe how</b> visitor logs were observed to be retained for at least three months.	<Report Findings Here>					
<b>9.5</b> Physically secure all media.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.5</b> Verify that procedures for protecting cardholder data include controls for physically securing all media (including but not limited to computers, removable electronic media, paper receipts, paper reports, and faxes).	<b>Identify the documented procedures for protecting cardholder data</b> reviewed to verify controls for physically securing all media are defined.	<Report Findings Here>					
<b>9.5.1</b> Store media backups in a secure location, preferably an off-site facility, such as an alternate or back-up site, or a commercial storage facility. Review the location's security at least annually.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.5.1</b> Verify that the storage location security is reviewed at least annually to confirm that backup media storage is secure.	<b>Describe how</b> processes were observed to verify that the storage location is reviewed at least annually to confirm that backup media storage is secure.	<Report Findings Here>					
<b>9.6</b> Maintain strict control over the internal or external distribution of any kind of media, including the following:			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.6</b> Verify that a policy exists to control distribution of media, and that the policy covers all distributed media including that distributed to individuals.	<b>Identify the documented policy to control distribution of media</b> that was reviewed to verify the policy covers all distributed media, including that distributed to individuals.	<Report Findings Here>					
<b>9.6.1</b> Classify media so the sensitivity of the data can be determined.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.6.1</b> Verify that all media is classified so the sensitivity of the data can be determined.	<b>Describe how</b> media was observed to be classified so the sensitivity of the data can be determined.	<Report Findings Here>					
<b>9.6.2</b> Send the media by secured courier or other delivery method that can be accurately tracked.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
9.6.2.a Interview personnel and examine records to verify that all media sent outside the facility is logged and sent via secured courier or other delivery method that can be tracked.	Identify the responsible personnel interviewed who confirm that all media sent outside the facility is logged and sent via secured courier or other delivery method that can be tracked.	<Report Findings Here>					
	Identify the records examined for this testing procedure.	<Report Findings Here>					
	Describe how the offsite tracking records verified that all media is logged and sent via secured courier or other delivery method that can be tracked.	<Report Findings Here>					
9.6.2.b Select a recent sample of several days of offsite tracking logs for all media, and verify tracking details are documented.	Identify the sample of recent offsite tracking logs for all media selected.	<Report Findings Here>					
	For each item in the sample, describe how tracking details were observed to be documented.	<Report Findings Here>					
9.6.3 Ensure management approves any and all media that is moved from a secured area (including when media is distributed to individuals).			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.6.3 Select a recent sample of several days of offsite tracking logs for all media. From examination of the logs and interviews with responsible personnel, verify proper management authorization is obtained whenever media is moved from a secured area (including when media is distributed to individuals).	Identify the responsible personnel interviewed who confirm that proper management authorization is obtained whenever media is moved from a secured area (including when media is distributed to individuals).	<Report Findings Here>					
	For each item in the sample in 9.6.2.b, describe how proper management authorization was observed to be obtained whenever media is moved from a secured area (including when media is distributed to individuals).	<Report Findings Here>					
9.7 Maintain strict control over the storage and accessibility of media.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.7 Obtain and examine the policy for controlling storage and maintenance of all media and verify that the policy requires periodic media inventories.	Identify the documented policy for controlling storage and maintenance of all media that was reviewed to verify that the policy defines required periodic media inventories.	<Report Findings Here>					
9.7.1 Properly maintain inventory logs of all media and conduct media inventories at least annually.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
9.7.1 Review media inventory logs to verify that logs are maintained and media inventories are performed at least annually.	Identify the media inventory logs reviewed.	<Report Findings Here>					
	Describe how the media inventory logs verified that:						
	<ul style="list-style-type: none"> <li>Media inventory logs of all media were observed to be maintained.</li> <li>Media inventories are performed at least annually.</li> </ul>	<Report Findings Here>					
9.8 Destroy media when it is no longer needed for business or legal reasons as follows:			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9.8 Examine the periodic media destruction policy and verify that it covers all media and defines requirements for the following:	Identify the policy document for periodic media destruction that was examined to verify it covers all media and defines requirements for the following:	<Report Findings Here>					
<ul style="list-style-type: none"> <li>Hard-copy materials must be crosscut shredded, incinerated, or pulped such that there is reasonable assurance the hard-copy materials cannot be reconstructed.</li> <li>Storage containers used for materials that are to be destroyed must be secured.</li> <li>Cardholder data on electronic media must be rendered unrecoverable (e.g. via a secure wipe program in accordance with industry-accepted standards for secure deletion, or by physically destroying the media).</li> </ul>	<ul style="list-style-type: none"> <li>Hard-copy materials must be crosscut shredded, incinerated, or pulped such that there is reasonable assurance the hard-copy materials cannot be reconstructed.</li> <li>Storage containers used for materials that are to be destroyed must be secured.</li> <li>Cardholder data on electronic media must be rendered unrecoverable (e.g. via a secure wipe program in accordance with industry-accepted standards for secure deletion, or by physically destroying the media).</li> </ul>						
9.8.1 Shred, incinerate, or pulp hard-copy materials so that cardholder data cannot be reconstructed. Secure storage containers used for materials that are to be destroyed.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/CCW	N/A	Not Tested	Not in Place
<b>9.8.1.a</b> Interview personnel and examine procedures to verify that hard-copy materials are crosscut shredded, incinerated, or pulped such that there is reasonable assurance the hard-copy materials cannot be reconstructed.	<b>Identify the responsible personnel</b> interviewed who confirm that hard-copy materials are crosscut shredded, incinerated, or pulped such that there is reasonable assurance the hard-copy materials cannot be reconstructed.	<Report Findings Here>					
	<b>Provide the name of the assessor</b> who attests that the procedures state that hard-copy materials are crosscut shredded, incinerated, or pulped such that there is reasonable assurance that hardcopy materials cannot be reconstructed.	<Report Findings Here>					
<b>9.8.1.b</b> Examine storage containers used for materials that contain information to be destroyed to verify that the containers are secured.	<b>Describe how</b> the storage containers used for materials to be destroyed were verified to be secured.	<Report Findings Here>					
<b>9.8.2</b> Render cardholder data on electronic media unrecoverable so that cardholder data cannot be reconstructed.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>9.8.2</b> Verify that cardholder data on electronic media is rendered unrecoverable (e.g. via a secure wipe program in accordance with industry-accepted standards for secure deletion, or by physically destroying the media).	<b>Describe how</b> cardholder data on electronic media is rendered unrecoverable, via secure wiping of media and/or physical destruction of media.	<Report Findings Here>					
	If data is rendered unrecoverable via secure deletion or a secure wipe program, <b>identify the industry-accepted standards</b> used.	<Report Findings Here>					
<b>9.9</b> Protect devices that capture payment card data via direct physical interaction with the card from tampering and substitution. <b>Note:</b> These requirements apply to card-reading devices used in card-present transactions (that is, card swipe or dip) at the point of sale. This requirement is not intended to apply to manual key-entry components such as computer keyboards and POS keypads.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
risk" vulnerabilities as defined in PCI DSS Requirement 6.1 are resolved.	For each of the four internal quarterly scans indicated at 11.2.1.a, indicate whether a rescan was required. (yes/no)	<Report Findings Here>					
	If "yes," describe how rescans were verified to be performed until all "high-risk" vulnerabilities as defined in PCI DSS Requirement 6.1 are resolved.	<Report Findings Here>					
11.2.1.c Interview personnel to verify that the scan was performed by a qualified internal resource(s) or qualified external third party, and if applicable, organizational independence of the tester exists (not required to be a QSA or ASV).	Identify the responsible personnel interviewed for this testing procedure.	<Report Findings Here>					
	Indicate whether a qualified internal resource performs the scan. (yes/no) If "no," mark the remainder of 11.2.1.c as "Not Applicable." If "yes," complete the following:	<Report Findings Here>					
	For the interview, summarize the relevant details discussed that verify:						
	▪ The scan was performed by a qualified internal resource	<Report Findings Here>					
	▪ Organizational independence of the tester exists.	<Report Findings Here>					
11.2.2 Perform quarterly external vulnerability scans, via an Approved Scanning Vendor (ASV) approved by the Payment Card Industry Security Standards Council (PCI SSC). Perform rescans as needed, until passing scans are achieved. <b>Note:</b> Quarterly external vulnerability scans must be performed by an Approved Scanning Vendor (ASV), approved by the Payment Card Industry Security Standards Council (PCI SSC). Refer to the ASV Program Guide published on the PCI SSC website for scan customer responsibilities, scan preparation, etc.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.2.2.a Review output from the four most recent quarters of external vulnerability scans and verify that four quarterly external vulnerability scans occurred in the most recent 12-month period.	Identify the external network vulnerability scan reports and supporting documentation reviewed.	<Report Findings Here>					
	Provide the name of the assessor who attests that four quarterly external vulnerability scans were verified to have occurred in the most recent 12-month period.	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<b>11.2.2.b</b> Review the results of each quarterly scan and rescan to verify that the ASV Program Guide requirements for a passing scan have been met (for example, no vulnerabilities rated 4.0 or higher by the CVSS, no automatic failures).	<b>Provide the name of the assessor</b> who attests that the results of each quarterly scan were reviewed and verified that the ASV Program Guide requirements for a passing scan have been met.	<Report Findings Here>					
	<i>For each of the four external quarterly scans indicated at 11.2.2.a, indicate whether a rescan was necessary. (yes/no)</i>	<Report Findings Here>					
	<i>If "yes," describe how the results of the rescan verified that the ASV Program Guide requirements for a passing scan have been met.</i>	<Report Findings Here>					
<b>11.2.2.c</b> Review the scan reports to verify that the scans were completed by a PCI SSC Approved Scanning Vendor (ASV).	<b>Provide the name of the assessor</b> who attests that the external scan reports were reviewed and verified to have been completed by a PCI SSC-Approved Scanning Vendor (ASV).	<Report Findings Here>					
<b>11.2.3</b> Perform internal and external scans, and rescans as needed, after any significant change. Scans must be performed by qualified personnel.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>11.2.3.a</b> Inspect and correlate change control documentation and scan reports to verify that system components subject to any significant change were scanned.	<b>Identify the change control documentation and scan reports</b> reviewed for this testing procedure.	<Report Findings Here>					
	<b>Describe how</b> the change control documentation and scan reports verified that all system components subject to significant change were scanned after the change.	<Report Findings Here>					
<b>11.2.3.b</b> Review scan reports and verify that the scan process includes rescans until: <ul style="list-style-type: none"> <li>For external scans, no vulnerabilities exist that are scored 4.0 or higher by the CVSS.</li> <li>For internal scans, all "high-risk" vulnerabilities as defined in PCI DSS Requirement 6.1 are resolved.</li> </ul>	For all scans reviewed in 11.2.3.a, <b>indicate whether</b> a rescan was required. <b>(yes/no)</b>	<Report Findings Here>					
	<i>If "yes" – for external scans, describe how rescans were performed until no vulnerabilities with a CVSS score greater than 4.0 exist.</i>	<Report Findings Here>					
	<i>If "yes" – for internal scans, describe how rescans were performed until either passing results were obtained or all "high-risk" vulnerabilities as defined in PCI DSS Requirement 6.1 were resolved.</i>	<Report Findings Here>

## Appendix A: Additional PCI DSS Requirements

This appendix contains additional PCI DSS requirements for different types of entities. The sections within this Appendix include:

- Appendix A1 Additional PCI DSS Requirements for Shared Hosting Providers
- Appendix A2: Additional PCI DSS Requirements for Entities using SSL/early TLS for Card-Present POS POI terminal connections
- Appendix A3: Designated Entities Supplemental Validation

Guidance and applicability information is provided within each section.

## Appendix A1: Additional PCI DSS Requirements for Shared Hosting Providers

**Note:** If the entity is not a shared hosting provider (and the answer at 2.6 was “no,” indicate the below as “Not Applicable.” Otherwise, complete the below.

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor’s Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<p><b>Indicate whether</b> the assessed entity is a shared hosting provider (indicated at Requirement 2.6). <b>(yes/no)</b></p> <p>If “no,” mark the below as “Not Applicable” (no further explanation required)</p> <p>If “yes,” <b>complete the following:</b></p>			<Report Findings Here>				
<p><b>A1</b> Protect each entity’s (that is, merchant, service provider, or other entity) hosted environment and data, per A1.1 through A1.4:</p> <p>A hosting provider must fulfill these requirements as well as all other relevant sections of the PCI DSS.</p> <p><b>Note:</b> Even though a hosting provider may meet these requirements, the compliance of the entity that uses the hosting provider is not guaranteed. Each entity must comply with the PCI DSS and validate compliance as applicable.</p>							
<p><b>A1</b> Specifically for a PCI DSS assessment of a shared hosting provider, to verify that shared hosting providers protect entities’ (merchants and service providers) hosted environment and data, select a sample of servers (Microsoft Windows and Unix/Linux) across a representative sample of hosted merchants and service providers, and perform A1.1 through A1.4 below:</p>							
<p>A1.1 Ensure that each entity only runs processes that have access to that entity’s cardholder data environment.</p>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>A1.1</b> If a shared hosting provider allows entities (for example, merchants or service providers) to run their own applications, verify these application processes run using the unique ID of the entity. For example:</p> <ul style="list-style-type: none"> <li>No entity on the system can use a shared web server user ID.</li> </ul>	<p><b>Indicate whether</b> the hosting provider allows hosted entities to run their own applications. <b>(yes/no)</b></p>	<Report Findings Here>					
	<p>If “no”:</p> <p><b>Describe how</b> it was observed that hosted entities are not able to run their own applications.</p>	<Report Findings Here>					
	<p>If “yes”:</p>	<Report Findings Here>					
	<p><b>Identify the sample</b> of servers selected for this testing procedure.</p>	<Report Findings Here>					

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<ul style="list-style-type: none"> <li>All CGI scripts used by an entity must be created and run as the entity's unique user ID.</li> </ul>	<b>Identify the sample</b> of hosted merchants and service providers (hosted entities) selected for this testing procedure.	<Report Findings Here>					
	<i>For each item in the sample, describe how</i> the system configurations verified that all hosted entities' application processes are run using the unique ID of that entity.						
	<Report Findings Here>						
	<b>Describe how</b> the hosted entities' application processes were observed to be running using the unique ID of the entity.						
	<Report Findings Here>						
<b>A1.2</b> Restrict each entity's access and privileges to its own cardholder data environment only.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>A1.2.a</b> Verify the user ID of any application process is not a privileged user (root/admin).	<i>For each item in the sample of servers and hosted entities from A1.1, perform the following:</i>						
	<b>Describe how</b> the system configurations verified that user IDs for hosted entities' application processes are not privileged users.						
	<Report Findings Here>						
	<b>Describe how</b> running application process IDs were observed to verify that the process IDs are not privileged users.						
	<Report Findings Here>						
<b>A1.2.b</b> Verify each entity (merchant, service provider) has read, write, or execute permissions only for files and directories it owns or for necessary system files (restricted via file system permissions, access control lists, chroot, jailshell, etc.)  <b>Important:</b> An entity's files may not be shared by group.	<i>For each item in the sample of servers and hosted entities from A1.1, describe how</i> the system configuration settings verified:						
	– Read permissions are only assigned for the files and directories the hosted entity owns, or for necessary systems files.						
	<Report Findings Here>						
	– Write permissions are only assigned for the files and directories the hosted entity owns, or for necessary systems files.						
	<Report Findings Here>						
– Access permissions are only assigned for the files and directories the hosted entity owns, or for necessary systems files.							
<Report Findings Here>							
<b>A1.2.c</b> Verify that an entity's users do not have write access to shared system binaries.	<i>For each item in the sample of servers and hosted entities from A1.1, describe how</i> the system configuration settings verified that an entity's users do not have write access to shared system binaries.						
	<Report Findings Here>						
<b>A1.2.d</b> Verify that viewing of log entries is restricted to the owning entity.	<i>For each item in the sample of servers and hosted entities from A1.1, describe how</i> the system configuration settings verified that viewing of log entries is restricted to the owning entity.						

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)							
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place			
	<Report Findings Here>									
<b>A1.2.e</b> To ensure each entity cannot monopolize server resources to exploit vulnerabilities (for example, error, race, and restart conditions resulting in, for example, buffer overflows), verify restrictions are in place for the use of these system resources: <ul style="list-style-type: none"> <li>• Disk space</li> <li>• Bandwidth</li> <li>• Memory</li> <li>• CPU</li> </ul>	<i>For each item in the sample of servers and hosted entities from A1.1, describe how</i> the system configuration settings verified restrictions are in place for the use of: <ul style="list-style-type: none"> <li>• Disk space</li> </ul>									
	<Report Findings Here>									
	<ul style="list-style-type: none"> <li>• Bandwidth</li> </ul>

	<ul style="list-style-type: none"> <li>• Memory</li> </ul>									
	<Report Findings Here>									
<ul style="list-style-type: none"> <li>• CPU</li> </ul>										
<Report Findings Here>										
<b>A1.3</b> Ensure logging and audit trails are enabled and unique to each entity's cardholder data environment and consistent with PCI DSS Requirement 10.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
<b>A1.3</b> Verify the shared hosting provider has enabled logging as follows, for each merchant and service provider environment: <ul style="list-style-type: none"> <li>• Logs are enabled for common third-party applications.</li> <li>• Logs are active by default.</li> <li>• Logs are available for review by the owning entity.</li> <li>• Log locations are clearly communicated to the owning entity.</li> </ul>	<i>For each item in the sample of servers and hosted entities from A1.1, describe how</i> processes were observed to verify the following: <ul style="list-style-type: none"> <li>• Logs are enabled for common third-party applications.</li> </ul>									
	<Report Findings Here>									
	<ul style="list-style-type: none"> <li>• Logs are active by default.</li> </ul>									
	<Report Findings Here>									
	<ul style="list-style-type: none"> <li>• Logs are available for review by the owning entity.</li> </ul>									
	<Report Findings Here>									
<ul style="list-style-type: none"> <li>• Log locations are clearly communicated to the owning entity.</li> </ul>										
<Report Findings Here>										

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<b>A1.4</b> Enable processes to provide for timely forensic investigation in the event of a compromise to any hosted merchant or service provider.			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>A1.4</b> Verify the shared hosting provider has written policies that provide for a timely forensics investigation of related servers in the event of a compromise.	<b>Identify the document</b> examined to verify that written policies provide for a timely forensics investigation of related servers in the event of a compromise.	<Report Findings Here>					

## **Appendix A2: Additional PCI DSS Requirements for Entities using SSL/Early TLS for Card-Present POS POI Terminal Connections**

Entities using SSL and early TLS for POS POI terminal connections must work toward upgrading to a strong cryptographic protocol as soon as possible. Additionally, SSL and/or early TLS must not be introduced into environments where those protocols don't already exist. At the time of publication, the known vulnerabilities are difficult to exploit in POS POI payment terminals. However, new vulnerabilities could emerge at any time, and it is up to the organization to remain up-to-date with vulnerability trends and determine whether or not they are susceptible to any known exploits.

The PCI DSS requirements directly affected are:

- |                          |   |
|--------------------------|---|
| <b>Requirement 2.2.3</b> | Implement additional security features for any required services, protocols, or daemons that are considered to be insecure.           |
| <b>Requirement 2.3</b>   | Encrypt all non-console administrative access using strong cryptography.  |
| <b>Requirement 4.1</b>   | Use strong cryptography and security protocols to safeguard sensitive cardholder data during transmission over open, public networks. |

SSL and early TLS must not be used as a security control to meet these requirements, except in the case of POS POI terminal connections as detailed in this appendix. To support entities working to migrate away from SSL/early TLS on POS POI terminals, the following provisions are included:

- New POS POI terminal implementations must not use SSL or early TLS as a security control
- All POS POI terminal service providers must provide a secure service offering.
- Service providers supporting existing POS POI terminal implementations that use SSL and/or early TLS must have a formal Risk Mitigation and Migration Plan in place.
- POS POI terminals in card-present environments that can be verified as not being susceptible to any known exploits for SSL and early TLS, **and the SSL/TLS termination points to which they connect**, may continue using SSL/early TLS as a security control.

This Appendix only applies to entities using SSL/early TLS as a security control to protect POS POI terminals, including service providers who provide connections into POS POI terminals.

PCI DSS Requirements and Testing Procedures	Reporting Instruction	Reporting Details: Assessor's Response	Summary of Assessment Findings (check one)				
			In Place	In Place w/ CCW	N/A	Not Tested	Not in Place
<p><b>Indicate whether</b> the assessed entity is using SSL / early TLS for POS POI terminal connections. <b>(yes/no)</b></p> <p>If "no," mark the below as "Not Applicable" (no further explanation required)</p> <p>If "yes," <b>complete the following (as applicable):</b></p>			<Report Findings Here>				
<p><b>A2.1</b> Where POS POI terminals (at the merchant or payment acceptance location) use SSL and/or early TLS, the entity must confirm the devices are not susceptible to any known exploits for those protocols.</p> <p><b>Note:</b> This requirement is intended to apply to the entity with the POS POI terminal, such as a merchant. This requirement is not intended for service providers who serve as the termination or connection point to those POS POI terminals. Requirements A2.2 and A2.3 apply to POS POI service providers.</p>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p><b>A2.1</b> For POS POI terminals using SSL and/or early TLS, confirm the entity has documentation (for example, vendor documentation, system/network configuration details, etc.) that verifies the devices are not susceptible to any known exploits for SSL/early TLS.</p>	<p><b>Identify the documentation</b> examined to verify that the POS POI terminals using SSL and/or early TLS are <b>not</b> susceptible to any known exploits for SSL/early TLS.</p>	<Report Findings Here>					
<p><b>A2.2 Requirement for Service Providers Only:</b> All service providers with existing connection points to POS POI terminals referred to in A2.1 that use SSL and/or early TLS must have a formal Risk Mitigation and Migration Plan in place.</p>			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

<p><b>A2.3</b> Examine system configurations and supporting documentation to verify the service provider offers a secure protocol option for their service.</p>	<p><b>Identify the supporting documentation</b> reviewed to verify the service provider offers a secure protocol option for their service</p>	<Report Findings Here>					
	<p><b>Identify the sample</b> of system components examined for this testing procedure.</p>	<Report Findings Here>					
	<p><i>For each item in the sample, describe how</i> system configurations verify that the service provider offers a secure protocol option for their service.</p>	<Report Findings Here>					

### **Appendix A3: Designated Entities Supplemental Validation (DESV)**

This Appendix applies only to entities designated by a payment brand(s) or acquirer as requiring additional validation of existing PCI DSS requirements. Entities that are required to validate to these requirements should refer to the following documents for reporting:

- *Reporting Template for use with the PCI DSS Designated Entities Supplemental Validation*
- *Supplemental Attestation of Compliance for Onsite Assessments – Designated Entities*

These documents are available in the PCI SSC Document Library.

***Note that an entity is ONLY required to undergo an assessment according to this Appendix if instructed to do so by an acquirer or a payment brand.***

## Appendix B: Compensating Controls

Compensating controls may be considered for most PCI DSS requirements when an entity cannot meet a requirement explicitly as stated, due to legitimate technical or documented business constraints, but has sufficiently mitigated the risk associated with the requirement through implementation of other, or compensating, controls.

Compensating controls must satisfy the following criteria:

1. Meet the intent and rigor of the original PCI DSS requirement.
2. Provide a similar level of defense as the original PCI DSS requirement, such that the compensating control sufficiently offsets the risk that the original PCI DSS requirement was designed to defend against. (See *Guidance Column* for the intent of each PCI DSS requirement.)
3. Be “above and beyond” other PCI DSS requirements. (Simply being in compliance with other PCI DSS requirements is not a compensating control.)

When evaluating “above and beyond” for compensating controls, consider the following:

**Note:** *The items at a) through c) below are intended as examples only. All compensating controls must be reviewed and validated for sufficiency by the assessor who conducts the PCI DSS review. The effectiveness of a compensating control is dependent on the specifics of the environment in which the control is implemented, the surrounding security controls, and the configuration of the control. Companies should be aware that a particular compensating control will not be effective in all environments.*

- a) Existing PCI DSS requirements CANNOT be considered as compensating controls if they are already required for the item under review. For example, passwords for non-console administrative access must be sent encrypted to mitigate the risk of intercepting clear-text administrative passwords. An entity cannot use other PCI DSS password requirements (intruder lockout, complex passwords, etc.) to compensate for lack of encrypted passwords, since those other password requirements do not mitigate the risk of interception of clear-text passwords. Also, the other password controls are already PCI DSS requirements for the item under review (passwords).
  - b) Existing PCI DSS requirements MAY be considered as compensating controls if they are required for another area, but are not required for the item under review.
  - c) Existing PCI DSS requirements may be combined with new controls to become a compensating control. For example, if a company is unable to render cardholder data unreadable per Requirement 3.4 (for example, by encryption), a compensating control could consist of a device or combination of devices, applications, and controls that address all of the following: (1) internal network segmentation; (2) IP address or MAC address filtering; and (3) one-time passwords.
4. Be commensurate with the additional risk imposed by not adhering to the PCI DSS requirement.

The assessor is required to thoroughly evaluate compensating controls during each annual PCI DSS assessment to validate that each compensating control adequately addresses the risk the original PCI DSS requirement was designed to address, per items 1-4 above. To maintain compliance, processes and controls must be in place to ensure compensating controls remain effective after the assessment is complete.

## Appendix C: Compensating Controls Worksheet

Use this worksheet to define compensating controls for any requirement where compensating controls are used to meet a PCI DSS requirement. Note that compensating controls should also be documented in the Report on Compliance in the corresponding PCI DSS requirement section.

**Note:** Only companies that have undertaken a risk analysis and have legitimate technological or documented business constraints can consider the use of compensating controls to achieve compliance.

### Requirement Number and Definition:

	Information Required	Explanation
1. Constraints	List constraints precluding compliance with the original requirement.	
2. Objective	Define the objective of the original control; identify the objective met by the compensating control.	
3. Identified Risk	Identify any additional risk posed by the lack of the original control.	
4. Definition of Compensating Controls	Define the compensating controls and explain how they address the objectives of the original control and the increased risk, if any.	
5. Validation of Compensating Controls	Define how the compensating controls were validated and tested.	
6. Maintenance	Define process and controls in place to maintain compensating controls.	

## Compensating Controls Worksheet – Completed Example

Use this worksheet to define compensating controls for any requirement noted as being “in place” via compensating controls.

**Requirement Number:** 8.1.1 – Are all users identified with a unique user ID before allowing them to access system components or cardholder data?

Information Required		Explanation
<b>1. Constraints</b>	List constraints precluding compliance with the original requirement.	<i>Company XYZ employs stand-alone Unix Servers without LDAP. As such, they each require a “root” login. It is not possible for Company XYZ to manage the “root” login nor is it feasible to log all “root” activity by each user.</i>
<b>2. Objective</b>	Define the objective of the original control; identify the objective met by the compensating control.	<i>The objective of requiring unique logins is twofold. First, it is not considered acceptable from a security perspective to share login credentials. Secondly, having shared logins makes it impossible to state definitively that a person is responsible for a particular action.</i>
<b>3. Identified Risk</b>	Identify any additional risk posed by the lack of the original control.	<i>Additional risk is introduced to the access control system by not ensuring all users have a unique ID and are able to be tracked.</i>
<b>4. Definition of Compensating Controls</b>	Define the compensating controls and explain how they address the objectives of the original control and the increased risk, if any.	<i>Company XYZ is going to require all users to log into the servers using their regular user accounts, and then use the “sudo” command to run any administrative commands. This allows use of the “root” account privileges to run pre-defined commands that are recorded by sudo in the security log. In this way, each user’s actions can be traced to an individual user account, without the “root” password being shared with the users.</i>
<b>5. Validation of Compensating Controls</b>	Define how the compensating controls were validated and tested.	<i>Company XYZ demonstrates to assessor that the sudo command is configured properly using a “sudoers” file, that only pre-defined commands can be run by specified users, and that all activities performed by those individuals using sudo are logged to identify the individual performing actions using “root” privileges.</i>
<b>6. Maintenance</b>	Define process and controls in place to maintain compensating controls.	<i>Company XYZ documents processes and procedures to ensure sudo configurations are not changed, altered, or removed to allow individual users to execute root commands without being individually identified, tracked and logged.</i>

## Appendix D: Segmentation and Sampling of Business Facilities/System Components
